Change United States. Congress. Senate. Committee on Energy and Natural Resources,1997      **Climate Change Law, Technology Transfer and Sustainable Development** Md Mahatab Uddin,2021-07-21 This book explores the possibilities and scope of facilitating innovation and transfer of the environmentally sound technologies in the Post Paris climate era The possibilities to be explored by the book will first focus on the roles of the climate finance and technological cooperation mechanisms in innovation and transfer of environmentally sound technologies Secondly the book will focus on role of the flexible mechanism i e indirect financial mechanisms which has been re introduced by the Paris Agreement as voluntary cooperation or sustainable development mechanism in innovation and transfer of environmentally sound technologies Thirdly the book will contain a comparative analysis regarding efficiency of the technology transfer mechanism under global climate regime in comparison with technology transfer mechanism that exists under other multilateral environmental agreements MEAs In addition to the above since the issues of trans boundary technology transfer is also a matter of concern for international trade the book will discuss to what extent the international trade related laws e g intellectual property laws investment related laws governed by the World Trade Organizations WTO can play role in facilitating transfer of the environmentally sound technologies Another important aspect that this book will cover is potential roles which private sectors can play in innovating and transferring environmentally sound technologies under above mentioned instruments of international law In short this book will be based on the argument that if global climate regime and the international trade regime collaborate each other in creating enabling environment and attracting private sector to invest in the field of environmentally sound technologies the global challenges of innovation and transfer of the environmentally sound technologies to the developing and least developed countries can be fulfilled in more efficient manner From conceptual perspectives discussions and analyses of the book will be made in the light of the principles of equity and common but differentiated responsibilities and respective capabilities CBDR RC two main guiding principles of the international laws on climate change This book will be of great interest to scholars of climate change technology transfer intellectual property and sustainable development Besides national and international level policy makers dealing with climate change and sustainable development will be greatly benefitted from this book      **Options for reducing greenhouse gas emissions from agriculture and food systems** Martin, Will,Vos, Rob,2025-02-28 Food systems generate about one third of global greenhouse gas GHG emissions Without reducing them it will not be possible to stabilize the climate and keep the increase in global temperature below 1.5oC from pre industrial levels About 50 percent of agricultural emissions in CO<sub>2</sub>eq comes from methane a super potent GHG mostly from livestock production and rice cultivation We consider six broad approaches to emission reduction from agriculture emission taxes repurposing of farm subsidies regulations investing in green innovations carbon credits and demand side interventions We find that not only carbon taxes on agricultural production but also rearranging agricultural subsidies will have only small impacts in terms of improving human and planetary health Regulatory

approaches including conditionality and payment for environmental services PES can be counterproductive if they lower yields and require expansion of agricultural land use Instead we find that investing more in R D for sustainable intensification of agriculture focused on productivity enhancing innovations have strong potential to generate major efficiency gains drastic reductions in emissions and improved food security Demand interventions designed to contribute both to environmental goals and improvements in health outcomes can play a supporting role Since multiple sustainable development goals are to be achieved no single instrument by itself will be effective Instead multiple policy instruments will need to be bundled and designed to create synergies and address trade offs

Earth's Climate Evolution C. P. Summerhayes, 2015-07-13 To understand climate change today we first need to know how Earth's climate changed over the past 450 million years Finding answers depends upon contributions from a wide range of sciences not just the rock record uncovered by geologists In Earth's Climate Evolution Colin Summerhayes analyzes reports and records of past climate change dating back to the late 18th century to uncover key patterns in the climate system The book will transform debate and set the agenda for the next generation of thought about future climate change The book takes a unique approach to the subject providing a description of the greenhouse and icehouse worlds of the past 450 million years since land plants emerged ignoring major earlier glaciations like that of Snowball Earth which occurred around 600 million years ago in a world free of land plants It describes the evolution of thinking in palaeoclimatology and introduces the main players in the field and how their ideas were received and in many cases subsequently modified It records the arguments and discussions about the merits of different ideas along the way It also includes several notes made from the author's own personal involvement in palaeoclimatological and palaeoceanographic studies and from his experience of working alongside several of the major players in these fields in recent years This book will be an invaluable reference for both undergraduate and postgraduate students taking courses in
