1. **Identify the problem.** The first step is to identify the problem. This involves understanding the symptoms and the context in which they are occurring.

2. **Generate hypotheses.** Once the problem is identified, the next step is to generate hypotheses. This involves brainstorming potential causes for the problem.

3. **Test the hypotheses.** The third step is to test the hypotheses. This involves gathering data and conducting experiments to determine which hypothesis is most likely correct.

4. **Implement the solution.** Once the correct hypothesis has been identified, the next step is to implement the solution. This involves putting the solution into practice and monitoring its effectiveness.

5. **Evaluate the results.** The final step is to evaluate the results. This involves assessing the outcomes of the solution and determining whether the problem has been successfully resolved.
