Users tend to think of real time as a way to handle exotic heart monitoring or robotics systems Then these users use UNIX for transaction processing and office applications and complain about its performance robustness and reliability Unfortunately the users don't realize that real time capabilities added to UNIX can provide better performance robustness and reliability for these non real time applications Many other vendors and users do realize this however There are indications even now that general purpose UNIX will go away as a separate entity It will be replaced by a real time UNIX General purpose UNIX will exist only as a subset of real time UNIX
