

Activity A:**Caterpillar-resistant corn**Get the Gizmo ready:

- Click **Reset** (↺) and check that **Task 1** is selected in the dropdown menu.

Introduction: Lepidoptera sp. larvae (caterpillars) eat corn kernels, leaves, and stalks. In this activity, use genetic engineering techniques to create a corn plant that is resistant to caterpillars.

Question: How can we produce corn that is resistant to Lepidoptera sp. larvae?

1. **Observe:** Click **Play**. Select one of the strains of bacteria harmful to larvae (by clicking on the plate).

Which strain did you select? _____

2 and 4 additional strains were too severely impacted and perished.

2. **Investigate:** Click **Continue**. The screen now shows the **genome**, or set of genes, of the selected bacteria. One of these genes produces the protein that kills the caterpillars. You will test each gene by adding it to the genome of a bacteria that does not kill caterpillars. This process is called **transformation**.

Drag three genes into the Petri dishes at lower right. These genes are now inserted into the genomes of the sensitive bacteria in the plates. Press **Play**. If none of those genes help to kill the caterpillars, click **Reset** and try three other genes. When you find a gene that kills the caterpillars, click on the Petri dish to select the gene that confers resistance.

Which gene did you select? _____

Gene F

In reality, finding a gene with a desired trait is much less common. Scientists search through many more bacterial strains and potential genes to find the traits they are looking for.

3. **Observe:** Click **Continue**. **Promoters** are regions of DNA that initiate the **transcription** of a gene. Some promoters only work in specific types of cells, such as leaf cells or root cells.

To determine which cells of a corn plant a promoter works in, four promoters have been attached to the **Green Fluorescent Protein** (GFP) gene. Each promoter-GFP gene has been inserted into a corn plant. Select **Lights off** to see the parts of each plant glow green and fill in the table below.

Promoter	Glowing plant part(s)	Promoter	Glowing plant part(s)
1	Roots and leaves	3	Roots
2	leaves	4	leaves

Which promoter is active in only the leaves?

1 and 3

In the whole plant?

Innovation, Dual Use, and Security Jonathan B. Tucker, 2012-03-30 A framework for assessing the security risks of emerging dual use technologies and devising tailored governance strategies is proposed and applied to contemporary case studies Recent advances in disciplines such as biotechnology nanotechnology and neuropharmacology entail a dual use dilemma because they promise benefits for human health and welfare yet pose the risk of misuse for hostile purposes The emerging field of synthetic genomics for example can

produce custom DNA molecules for life saving drugs but also makes possible the creation of deadly viral agents for biological warfare or terrorism The challenge for policymakers is to prevent the misuse of these new technologies without forgoing their benefits Innovation Dual Use and Security offers a systematic approach for managing the dual use dilemma The book presents a decision framework for assessing the security risks of emerging technologies and fashioning governance strategies to manage those risks This framework is applied to fourteen contemporary case studies including synthetic genomics DNA shuffling and directed evolution combinatorial chemistry protein engineering immunological modulation and aerosol vaccines The book also draws useful lessons from two historical cases the development of the V series nerve agents in Britain and the use and misuse of LSD by the U S Army and the CIA Innovation Dual Use and Security offers a comprehensive multifaceted introduction to the challenges of governing dual use technologies in an era of rapid innovation The book will be of interest to government officials and other practitioners as well as to students and scholars in security studies science and technology studies biology and chemistry
