fib Fédération internationale du béton, 2004-01-01 The construction industry including the concrete industry faces the transformation process from the traditional building process to the new approach sustainable construction. Environmental aspects represent a key role in this process. The principal importance of the environmental impact evaluation of concrete structures follows from the high amount of concrete structures built around the world every year. The specific amount of harmful impacts embodied in concrete unit is in comparison with other building materials relatively small. However, due to the high production of concrete, the final negative environmental impact of concrete structures is significant. Any improvement of concrete design principles, methodologies of assessment, construction and demolition technologies and management of operation and use of concrete structures thus provides a very significant contribution to the general goal: the achievement of a development process in the sustainable way. The objective of this state-of-the-art report is to provide the framework of so-called environmental design to document Best Available Technology (BAT) for concrete structures from an environmental point of view and to summarize methodologies for environmental impact evaluation and optimization of concrete structures. Although the authors of the report were from Europe and Japan, it was attempted to collect information as widely as possible. *Practical Building Conservation*, 2012 A great deal of research and literature has been produced on repairing concrete structures but very little aimed at conserving the character or appearance of historic examples. This volume offers guidance as to how that should be done. It includes a brief history of the use of the material and explains the criteria for listing before assessing decay mechanisms and determining appropriate repair strategies. Concrete Repair to EN 1504 Michael Raupach, Till Büttner, 2014-05-15 The Construction Sector Is Increasingly Focused On Repair. As concrete structures are maintained longer for both environmental and financial reasons, the diagnosis, design and selection of products and repair work all depend on the individual condition of the buildings and require specialist knowledge from everyone involved. *Concrete Repair to EN 1504 Quick Reference Guide, Concrete Restoration Repair and Protection* Powercrete (Firm), 1992 Welcome to the world of Powercrete, the new state-of-the-art technology for concrete repair. Powercrete is the concrete restoration division of Sto Corp. We hope you will find our Quick reference guide useful to carry with you as reference to all job sites that involve concrete restoration, stucco repairs or protection of concrete structures. Page i
