

# Calculating a Subnet Mask

- Subnetting Example: To divide a large network into smaller subnets, follow this process:
  - Decide how many subnets you need. Each router interface connection indicates a required subnet.
  - Decide how many bits you need to meet or exceed the number of required subnets.
  - Use the formula  $2^n$ , with  $n$  representing the number of bits you must reallocate from the host ID to the network ID.
  - The number of subnets you create is always a power of 2, so if you need 60 subnets, you must reallocate 6 bits ( $2^6 = 64$ ) because reallocating 5 bits gives you only 32 subnets.
