Data Mining: Concepts and Techniques Jiawei Han, Micheline Kamber, Jian Pei, 2011-06-09 Data Mining Concepts and Techniques provides the concepts and techniques in processing gathered data or information which will be used in various applications. Specifically, it explains data mining and the tools used in discovering knowledge from the collected data. This book is referred to as the knowledge discovery from data (KDD). It focuses on the feasibility, usefulness, effectiveness, and scalability of techniques of large data sets. After describing data mining, this edition explains the methods of knowing preprocessing, processing, and warehousing data. It then presents information about data warehouses, online analytical processing (OLAP), and data cube technology. Then, the methods involved in mining frequent patterns, associations, and correlations for large data sets are described. The book details the methods for data classification and introduces the concepts and methods for data clustering. The remaining chapters discuss outlier detection and the trends, applications, and research frontiers in data mining. This book is intended for Computer Science students, application developers, business professionals, and researchers who seek information on data mining. Presents dozens of algorithms and implementation examples, all in pseudo code and suitable for use in real world large scale data mining projects. Organizational Data Mining Hamid R. Nemati,Christopher D. Barko,2004-01-01 Mountains of business data are piling up in organizations every day These organizations collect data from multiple sources both internal and external These sources include legacy systems customer relationship management and enterprise resource planning applications online and e commerce systems government organizations and business suppliers and partners A recent study from the University of California at Berkeley found the amount of data organizations collect and store in enterprise databases doubles every year and slightly more than half of this data will consist of reference information which is the kind of information strategic business applications and decision support systems demand Kestelyn 2002 Terabyte sized 1 000 megabytes databases are commonplace in organizations today and this enormous growth will make petabyte sized databases 1 000 terabytes a reality within the next few years Whiting 2002 By 2004 the Gartner Group estimates worldwide data volumes will be 30 times those of 1999 which translates into more data having been produced in the last 30 years than during the previous 5 000 Wurman 1989

dreams of the fledgling field of artificial intelligence AI was to build computer programs that could play games as well as or better than the best human players Despite early optimism in the field the challenge proved to be surprisingly difficult However the 1990s saw amazing progress Computers are now better than humans in checkers Othello and Scrabble are at least as good as the best humans in backgammon and chess and are rapidly improving at hex go poker and shogi This book documents the progress made in computers playing games and puzzles The book is the definitive source for material of high performance game playing programs New Fundamental Technologies in Data Mining Kimito Funatsu, 2011-01-21 The progress of data mining technology and large public popularity establish a need for a comprehensive text on the subject The series of books entitled by Data Mining address the need by presenting in depth description of novel mining algorithms and many useful applications In addition to understanding each section deeply the two books present useful hints and strategies to solving problems in the following chapters The contributing authors have highlighted many future research directions that will foster multi disciplinary collaborations and hence will lead to significant development in the field of data mining

Social Network Analysis in Predictive Policing Mohammad A. Tayebi, Uwe Glässer, 2016-10-11 This book focuses on applications of social network analysis in predictive policing Data science is used to identify potential criminal activity by analyzing the relationships between offenders to fully understand criminal collaboration patterns Co offending networks networks of offenders who have committed crimes together have long been recognized by law enforcement and intelligence agencies as a major factor in the design of crime prevention and intervention strategies Despite the importance of co offending network analysis for public safety computational methods for analyzing large scale criminal networks are rather premature This book extensively and systematically studies co offending network analysis as effective tool for predictive policing The formal representation of criminological concepts presented here allow computer scientists to think about algorithmic and computational solutions to problems long discussed in the criminology literature For each of the studied problems we start with well founded concepts and theories in criminology then propose a computational method and finally provide a thorough experimental evaluation along with a discussion of the results In this way the reader will be able to study the complete process of solving real world multidisciplinary problems **Headway in Spatial Data Handling** Anne

Ruas, Christopher Gold, 2008-08-09 Geographic information is a key element for our modern society Put simply it is information whose spatial and often temporal location is fundamental to its value and this distinguishes it from many other types of data and analysis For sustainable development climate change or more simply resource sharing and economic development this information helps to facilitate human activities and to foresee the impact of these activities in space as well as inversely the

impact of space on our lives The International Symposium on Spatial Data Handling SDH is a primary research forum where questions related to spatial and temporal modelling and analysis data integration visual representation or semantics are raised The first symposium commenced in 1984 in Zurich and has since been organised every two years under the umbrella of the International Geographical Union Commission on Geographical Information Science <http://www.igugis.org> Over the last 28 years the Symposium has been held in st 1 Zurich 1984 nd 2 Seattle 1986 rd 3 Sydney 1988 th 4 Zurich 1990 th 5 Charleston 1992 th 6 Edinburgh 1994 th 7 Delft 1996 th 8 Vancouver 1998 th 9 Beijing 2000 th 10 Ottawa 2002 th 11 Leicester 2004 th 12 Vienna 2006 th This book is the proceedings of the 13 International Symposium on Spatial Data Handling Spatio-Temporal Data Streams Zdravko Galić, 2016-08-26 This SpringerBrief presents the fundamental concepts of a specialized class of data stream spatio temporal data streams and demonstrates their distributed processing using Big Data frameworks and platforms It explores a consistent framework which facilitates a thorough understanding of all different facets of the technology from basic definitions to state of the art techniques Key topics include spatio temporal continuous queries distributed stream processing SQL like language embedding and trajectory stream clustering Over the course of the book the reader will become familiar with spatio temporal data streams management and data flow processing which enables the analysis of huge volumes of location aware continuous data streams Applications range from mobile object tracking and real time intelligent transportation systems to traffic monitoring and complex event processing Spatio Temporal Data Streams is a valuable resource for researchers studying spatio temporal data streams and Big Data analytics as well as data engineers and data scientists solving data management and analytics problems associated with this class of data

Advanced Methods for Knowledge Discovery from Complex Data Ujjwal Maulik, Lawrence B. Holder, Diane J. Cook, 2006-05-06 The growth in the amount of data collected and generated has exploded in recent times with the widespread automation of various day to day activities advances in high level scientific and engineering research and the development of efficient data collection tools This has given rise to the need for automatically analyzing the data in order to extract knowledge from it thereby making the data potentially more useful Knowledge discovery and data mining KDD is the process of identifying valid novel potentially useful and ultimately understandable patterns from massive data repositories It is a multi disciplinary topic drawing from several fields including expert systems machine learning intelligent databases knowledge acquisition case based reasoning pattern recognition and statistics Many data mining systems have typically evolved around well organized database systems e.g relational databases containing relevant information But more and more one finds relevant information hidden in unstructured text and in other complex forms Mining in the domains of the world wide web bioinformatics geoscientific data and spatial and temporal applications comprise some illustrative examples in this regard Discovery of knowledge or potentially useful patterns from such complex data often requires the application of advanced techniques that are better able to exploit the nature and representation of the data Such advanced

methods include among others graph based and tree based approaches to relational learning sequence mining link based classification Bayesian networks hidden Markov models neural networks kernel based methods evolutionary algorithms rough sets and fuzzy logic and hybrid systems Many of these methods are developed in the following chapters
