1.0 GENERAL DESCRIPTION

Hankison silica gel desiccant dryers are designed to lower the dew point of compressed air. They consist of a filter housing filled with silica gel desiccant through which air passes. As the air passes across the silica gel desiccant, moisture is adsorbed into the pores of the silica gel, reducing the moisture content (dew point) of the outlet air. Once the silica gel desiccant reaches a level of saturation that causes the outlet dew point to rise above an acceptable level, the silica gel desiccant can be either replaced or regenerated by baking in an oven.
