Determine the lowest-degree polynomial that has the given graph.

Estimate the coordinates of each turning point and state whether each corresponds to a local maximum or a local minimum.

Match the graph with its function.

8.  $f(x) = 2x^4 - 3x^2 - 2$

9.  $f(x) = 2x^6 - 6x^4 + 4x^2 - 2$

10.  $f(x) = -2x^4 + 3x^2 - 2$

Determine the  $x$ -intercepts of the function.

Algebra held at Queen Mary and West eld College London August 1993 This book introduces the reader to the role Magma plays in advanced mathematical research Each paper examines how the computer can be used to gain insight into either a single problem or a small group of closely related problems The intention is to present su cient detail so that a reader can a gain insight into the mathematical questions that are the origin of the problems and b develop an understanding as to how such computations are speci ed in Magma It is hoped that the reader will come to a realisation of the important role that computational algebra can play in mathematical research Readers not primarily interested in using Magma will easily acquire the skills needed to undertake basic programming in Magma while experienced Magma users can learn both mathematics and advanced computational methods in areas related to their own The core of the volume comprises 14 papers The authors were invited to submit articles on designated topics and these articles were then reviewed by referees Although by no means exhaustive the topics range over a consid able part of Magma s coverage of algorithmical algebra from number theory and algebraic geometry via representation theory and computational group theory to some branches of discrete mathematics and graph theory The papers are preceded by an outline of the Magma project a brief summary of the papers and some instructions on reading the Magma code A basic introduction to the Magma language is given in an appendix The editor expresses their gratitude to the contributors to this volume both for the work put into producing the papers and for their patience

*The Transferred Life of George Eliot* Philip Davis, 2017-03-09 Reading George Eliot s work was described by one Victorian critic as like the feeling of entering the confessional in which the novelist sees and hears all the secrets of human psychology that roar which lies on the other side of silence This new biography of George Eliot goes beyond the much told story of her life It gives an account of what it means to become a novelist and to think like a novelist in particular a realist novelist for whom art exists not for art s sake but in the exploration and service of human life It shows the formation and the workings of George Eliot s mind as it plays into her creation of some of the greatest novels of the Victorian era When at the age of 37 Marian Evans became George Eliot this change followed long mental preparation and personal suffering During this time she related her power of intelligence to her capacity for feeling discovering that her thinking and her art had to combine both That was the great ambition of her novels not to be mere pastimes or fictions but experiments in life and helps in living through the deepest account of human complexity available Philip Davis s illuminating new biography will enable you both to see through George Eliot s eyes and to feel what it is like to be seen by her in the imaginative involvement of her readers with her characters
