*The Latest and Best of TESS*, 1991    *Noncommutative Function-Theoretic Operator Theory and Applications* Joseph A. Ball, Vladimir Bolotnikov, 2021-12-16 This concise monograph explores how core ideas in Hardy space function theory and operator theory continue to be useful and informative in new settings leading to new insights for noncommutative multivariable operator theory. Beginning with a review of the confluence of system theory ideas and reproducing kernel techniques the book then covers representations of backward shift invariant subspaces in the Hardy space as ranges of observability operators and representations for forward shift invariant subspaces via a Beurling-Lax representer equal to the transfer function of the linear system. This pair of backward shift invariant and forward shift invariant subspace form a generalized orthogonal decomposition of the ambient Hardy space. All this leads to the de Branges-Rovnyak model theory and characteristic operator function for a Hilbert space contraction operator. The chapters that follow generalize the system theory and reproducing kernel techniques to enable an extension of the ideas above to weighted Bergman space multivariable settings.

**Relatively Hyperbolic Groups: Intrinsic Geometry, Algebraic Properties, and Algorithmic Problems** Denis V. Osin, 2006 In this the authors obtain an isoperimetric characterization of relatively hyperbolicity of a group with respect to a collection of subgroups. This allows them to apply classical combinatorial methods related to van Kampen diagrams to obtain relative analogues of some well known algebraic and geometric properties of ordinary hyperbolic groups. There is also an introduction and study of the notion of a relatively quasi convex subgroup of a relatively hyperbolic group and solve some natural algorithmic problems.
