Takeuchi, Yoshio Takane, 2011-04-06 Aside from distribution theory projections and the singular value decomposition SVD are the two most important concepts for understanding the basic mechanism of multivariate analysis The former underlies the least squares estimation in regression analysis which is essentially a projection of one subspace onto another and the latter underlies principal component analysis which seeks to find a subspace that captures the largest variability in the original space This book is about projections and SVD A thorough discussion of generalized inverse g inverse matrices is also given because it is closely related to the former The book provides systematic and in depth accounts of these concepts from a unified viewpoint of linear transformations finite dimensional vector spaces More specially it shows that projection matrices projectors and g inverse matrices can be defined in various ways so that a vector space is decomposed into a direct sum of disjoint subspaces Projection Matrices Generalized Inverse Matrices and Singular Value Decomposition will be useful for researchers practitioners and students in applied mathematics statistics engineering behaviormetrics and other fields
