The Oxford Handbook of Spontaneous Thought Kieran C.R. Fox, Kalina Christoff, 2018-05-16 Where do spontaneous thoughts come from It may be surprising that the seemingly straightforward answers from the mind or from the brain are in fact an incredibly recent understanding of the origins of spontaneous thought For nearly all of human history our thoughts especially the most sudden insightful and important were almost universally ascribed to divine or other external sources Only in the past few centuries have we truly taken responsibility for their own mental content and finally localized thought to the central nervous system laying the foundations for a protoscience of spontaneous thought But enormous questions still loom what exactly is spontaneous thought Why does our brain engage in spontaneous forms of thinking and when is this most likely to occur And perhaps the question most interesting and accessible from a scientific perspective how does the brain generate and evaluate its own spontaneous creations Spontaneous thought includes our daytime fantasies and mind wandering the flashes of insight and inspiration familiar to the artist scientist and inventor and the nighttime visions we call dreams This Handbook brings together views from neuroscience psychology philosophy phenomenology history education contemplative traditions and clinical practice to begin to address the ubiquitous but poorly understood mental phenomena that we collectively call spontaneous thought In studying such an abstruse and seemingly impractical subject we should remember that our capacity

for spontaneity originality and creativity defines us as a species and as individuals Spontaneous forms of thought enable us to transcend not only the here and now of perceptual experience but also the bonds of our deliberately controlled and goal directed cognition they allow the space for us to be other than who we are and for our minds to think beyond the limitations of our current viewpoints and beliefs The Oxford Handbook of Evolutionary Psychology and Religion James R.

Liddle,Todd K. Shackelford,2021 R sum This handbook is currently in development with individual articles publishing online in advance of print publication At this time we cannot add information about unpublished articles in this handbook however the table of contents will continue to grow as additional articles pass through the review process and are added to the site Please note that the online publication date for this handbook is the date that the first article in the title was published online For more information please read the site FAQs *Eco-Translation* Michael Cronin,2017-01-06 Ecology has become a

central question governing the survival and sustainability of human societies cultures and languages In this timely study Michael Cronin investigates how the perspective of the Anthropocene or the effect of humans on the global environment has profound implications for the way translation is considered in the past present and future Starting with a deep history of translation and ranging from food ecology to inter species translation and green translation technology this thought provoking book offers a challenging and ultimately hopeful perspective on how translation can play a vital role in the future survival of the planet **The Oxford Handbook of Evolutionary Psychology and Parenting** Viviana A.

Weekes-Shackelford,Todd K. Shackelford,2021 The Oxford Handbook of Evolutionary Psychology and Parenting provides a comprehensive resource for work on how our evolutionary past informs current parenting roles and practices It features chapters from leaders in the field covering state of the art research The Handbook is designed for advanced undergraduates graduates and professionals in psychology anthropology biology sociology and demography as well as many other social and life science disciplines It is the first resource of its kind that brings together empirical and theoretical contributions from scholarship at the intersection of evolutionary psychology and parenting Each of the authors has a Ph D in evolutionary psychology and much of their research focuses on violence and conflict in families and romantic relationships **The**

Recursive Mind Michael C. Corballis,2014-04-27 A groundbreaking theory of what makes the human mind unique The Recursive Mind challenges the commonly held notion that language is what makes us uniquely human In this compelling book Michael Corballis argues that what distinguishes us in the animal kingdom is our capacity for recursion the ability to embed our thoughts within other thoughts I think therefore I am is an example of recursive thought because the thinker has inserted himself into his thought Recursion enables us to conceive of our own minds and the minds of others It also gives us the power of mental time travel the ability to insert past experiences or imagined future ones into present consciousness Drawing on neuroscience psychology animal behavior anthropology and archaeology Corballis demonstrates how these recursive structures led to the emergence of language and speech which ultimately enabled us to share our thoughts plan

with others and reshape our environment to better reflect our creative imaginations He shows how the recursive mind was critical to survival in the harsh conditions of the Pleistocene epoch and how it evolved to foster social cohesion He traces how language itself adapted to recursive thinking first through manual gestures then later with the emergence of Homo sapiens vocally Toolmaking and manufacture arose and the application of recursive principles to these activities in turn led to the complexities of human civilization the extinction of fellow large brained hominins like the Neandertals and our species supremacy over the physical world

Attention and Vision in Language Processing Ramesh Kumar Mishra,Narayanan Srinivasan,Falk Huettig,2015-07-13 This volume provides a comprehensive overview of the nature of attentional and visual processes involved in language comprehension Key concerns include how linguistic and non linguistic processes jointly determine language comprehension and production and how the linguistic system interfaces with perceptual systems and attention Language scientists have traditionally considered language in isolation from other cognitive and perceptual systems such as attention vision and memory In recent years however it has become increasingly clear that language comprehension must be studied within interaction contexts The study of multimodal interactions and attentional processes during language processing has thus become an important theoretical focus that guides many research programs in psycholinguistics and related fields

The Self-Field Chris Abel,2021-03-15 In this incisive study of the biological and cultural origins of the human self the author challenges readers to re think ideas about the self and consciousness as being exclusive to humans In their place he expounds a metatheoretical approach to the self as a purposeful system of extended cognition common to animal life the invisible medium maintaining mind body and environment as an integrated field of being Supported by recent research in evolutionary and developmental studies together with related discoveries in animal behaviour and the neurosciences the author examines the factors that have shaped the evolution of the animal self across widely different species and times through to the modern technologically enmeshed human self the differences between which he contends are relations of degree rather than absolute differences We are he concludes instinctive and fuzzy individuals clinging to fragile identities in an artificial and volatile world of humanity s own making but which we now struggle to control This book which restores the self to its fundamental place in identity formation will be of great interest for students and academics in the fields of social developmental and environmental psychology together with readers from other

disciplines in the humanities especially philosophy cultural theory and architecture **Dawn** Rik Smits,2016-02-10 In this work originally published in Dutch Rik Smits theorizes that language could not have developed originally as a system of communication It is instead the result of combining separate abilities each of which developed independently to aid the survival of early humans Lacking strength and speed man relies on wisdom for survival Smits theorizes that human skills in calculation and estimation continued to develop until they were sufficient to accommodate a system as complex as grammar Only after our linguistic ability emerged could humans think logically and share our reasoning with others at which point almost everything we now call culture began to flourish Smits concludes that language cannot have long predated the invention of agriculture in the Middle East some 14 000 years ago The huge advance in civilization represented by language made abstract powers of reasoning indispensable for the first time along with highly developed concepts of identity past present and future all of which rely upon language This explanation of the origins of language throws new light on cave paintings by Cro Magnon man whose masterpieces date from about 40 000 to 15 000 years ago Anatomically Cro Magnons were modern humans but they had no language in the modern sense Their absence of language gave them no true sense of individual identity This translation was made possible by a grant from the Dutch Foundation for Literature **Interest in**

The Ends of the World Déborah Danowski,Eduardo Viveiros de Castro,2016-12-20 The end of the world is a seemingly interminable topic at least of course until it happens Environmental catastrophe and planetary apocalypse are subjects of enduring fascination and as ethnographic studies show human cultures have approached them in very different ways Indeed in the face of the growing perception of the dire effects of global warming some of these visions have been given a new lease on life Information and analyses concerning the human causes and the catastrophic consequences of the planetary crisis have

been accumulating at an ever increasing rate mobilising popular opinion as well as academic reflection In this book philosopher D borah Danowski and anthropologist Eduardo Viveiros de Castro offer a bold overview and interpretation of these current discourses on the end of the world reading them as thought experiments on the decline of the West s anthropological adventure that is as attempts though not necessarily intentional ones at inventing a mythology that is adequate to the present This work has important implications for the future development of ecological practices and it will appeal to a broad audience interested in contemporary anthropology philosophy and environmentalism The WINNERS!
