Environmental Hazards and Resilience Dennis J. Parker, Edmund C. Penning-Rowsell, 2021-08-26 Building resilience to the world's increasingly damaging environmental hazards has become a priority This book considers the scientific advances which have been made around the world to enhance this resilience Although resilience is not new it is through the idea of resilience that governments organisations and communities around the world are now seeking to address the rapidly increasing losses that environmental hazards cause so that fewer lives are lost and damage is reduced Alternative ideas and approaches have been helpful in reducing loss but resilience offers a fresh and potentially effective means of reducing it

further Adopting a scientific approach and scientific evidence is important in applying the resilience idea in hazard mitigation However the science of resilience is at an immature stage of development with much discussion about the concept and how it should be understood and interpreted Building useful theories remains a challenge although some of the building blocks of theory have been developed More attention has been given to developing indicators and frameworks of resilience which are subsequently applied to measure resilience to hazards such as flooding earthquake and climate change Environmental Hazards and Resilience Theory and Evidence considers the scientific and theoretical challenges of making progress in applying resilience to environmental hazard mitigation and provides examples from around the world including the USA New Zealand China Bangladesh and elsewhere The chapters in this book were originally published in the Environmental Hazards

Organizing for Policy Influence Benjamin Farrer,2017-08-09 In this book Benjamin Farrer explains how activists can influence the policies they care about even when they are outnumbered and their issues are ignored The solution lies in a surprising place organizational choice Different types of organizations will be more influential under particular democratic institutions If they choose the optimal type of organization given their institutional context then even minority groups can be influential Environmentalists are a key example of how small groups can sometimes punch above their weight Environmentalists in different countries have made different organizational choices These choices explain whether or not they succeeded in influencing policy In the empirical chapters that follow Farrer shows that environmentalists can sometimes be more influential if they form interest groups but under other institutions political parties are the optimal organizational choice Although interest groups are often easier to create national institutions can sometimes insulate mainstream politicians from niche interest groups When institutions deny access to interest groups activists are forced to send the stronger signal of party entry Using a variety of methods including a formal model an experiment and a wealth of empirical data from a variety of settings Farrer proves that this theory of organizational choice adds to our understanding of several crucial phenomena First it helps explain patterns of political participation by showing the importance of instrumental rather than purely expressive motivations for activism Second it provides an important modification to Duverger s 1954 law by showing that new party entry is a function not only of electoral rules but also of the rules that govern interest groups Third it extends research on the role of institutions in determining policy outputs by showing that policy outcomes are a function of the interaction between organizational choices and institutional context **Special Papers** ,1934 Conservation for the Anthropocene Ocean Phillip S. Levin,Melissa R. Poe,2017-06-01 Conservation for the Anthropocene Ocean Interdisciplinary Science in Support of Nature and People emphasizes strategies to better connect the practice of marine conservation with the needs and priorities of a growing global human population It conceptualizes nature and people as part of shared ecosystems with interdisciplinary methodologies and science based applications for coupled sustainability A central challenge facing conservation is the development of practical means for addressing the interconnectedness of ecosystem

health and human well being advancing the fundamental interdisciplinary science that underlies conservation practice and implementing this science in decisions to manage preserve and restore ocean ecosystems Though humans have intentionally and unintentionally reshaped their environments for thousands of years the scale and scope of human influence upon the oceans in the Anthropocene is unprecedented Ocean science has increased our knowledge of the threats and impacts to ecological integrity yet the unique scale and scope of changes increases uncertainty about responses of dynamic socio ecological systems Thus to understand and protect the biodiversity of the ocean and ameliorate the negative impacts of ocean change on people it is critical to understand human beliefs values behaviors and impacts Conversely on a human dominated planet it is impossible to understand and address human well being and chart a course for sustainable use of the oceans without understanding the implications of environmental change for human societies that depend on marine ecosystems and resources This work therefore presents a timely needed and interdisciplinary approach to the conservation of our oceans Helps marine conservation scientists apply principles from oceanography ecology anthropology economics political science and other natural and social sciences to manage and preserve marine biodiversity Facilitates understanding of how and why social and environmental processes are coupled in the quest to achieve healthy and sustainable oceans Uses a combination of expository material practical approaches and forward looking theoretical discussions to enhance value for readers as they consider conservation research management and planning *Earthquake Science and Seismic Risk Reduction* F.

Mulargia,R.J. Geller,2012-12-06 What is the first thing that ordinary people for whom journalists are the proxy ask when they meet a seismologist It is certainly nothing technical like What was the stress drop of the last earthquake in the Imperial Valley It is a simple question which nevertheless summarizes the real demands that society has for seismology This question is Can you predict earthquakes Regrettably notwithstanding the feeling of omnipotence induced by modern technology the answer at present is the very opposite of Yes of course The primary motivation for the question Can you predict earthquakes is practical No other natural phenomenon has the tremendous destructive power of a large earthquake a power which is rivaled only by a large scale war An earthquake in a highly industrialized region is capable of adversely affecting the economy of the whole world for several years But another motivation is cognitive The aim of science is understanding nature and one of the best ways to show that we understand a phenomenon is the ability to make accurate predictions PeaceTalk Leo R.
