The digestive system is responsible for breaking down food into nutrients that can be absorbed by the body. It consists of the mouth, pharynx, esophagus, stomach, small intestine, large intestine, and rectum. The liver and pancreas also play important roles in digestion.

An anatomical illustration of the human respiratory system. It shows the trachea (windpipe) leading from the larynx down to the bronchi, which branch into the left and right lungs. The lungs are shown in a light pink color, and the trachea is a darker pink. The diagram is set against a light blue background with a faint silhouette of a human head and neck.

This diagram illustrates the anatomy of the human ear. The external ear (pinna) is shown on the right, leading into the ear canal. The middle ear is depicted in the center, containing the ossicles (malleus, incus, stapes). The internal ear is shown on the left, including the cochlea (responsible for hearing) and the vestibular system (responsible for balance). Labels indicate various parts of the ear, such as the eardrum (tympanic membrane) and the oval and round windows of the cochlea.
