## **Intro to Engineering & Design EOC Study Guide**

### **Unit 1 – Design Process – 19%**

1. How might we create the best possible solution to a problem?  
Engineers try to think “outside the box” in order to solve new problems or find ways to improve current solutions.
2. What is the most effective way to generate potential solutions to a problem? How many alternate solutions should you generate?  
Brainstorming with a group, research and testing possible solutions
3. What is an engineer? What types of work do engineers do? Engineering is the application of mathematics and scientific principles to better or improve life. An engineer is a person who is trained in and uses technological and scientific knowledge to solve practical problems. Research, Develop, Design, Supervise, Manage, Production and Construction, Operations, Plant management, and Sales.
4. Why Keep an Engineering Notebook? An engineering notebook is recognized as a legal document that is used in patent activities to...
  - a. Prove the origin of an idea that led to a solution
  - b. Prove when events or ideas occurred
  - c. Prove diligence in turning the idea into a solution
  - d. Prove when an idea became a working solution (“reduced to practice”)
5. What are the 4 best Practices for the Engineering Notebook?
  - a. Be Neat,
  - b. be Accurate,
  - c. be Legible,
  - d. be Thorough.
6. Explain the concept of proportion. Paying close attention to the underlying basic shapes and the relative proportions of various features of the object will allow you to more accurately reflect the true shapes and proportions of the object in your sketch.

## **Intro To Engineering Design Eoc Study Guide:**

**Planning and Design of Engineering Systems** Graeme Dandy, David Walker, Trevor Daniell, Robert Warner, Bernadette Foley, 2017-12-06 This newly updated book offers a comprehensive introduction to the scope and nature of engineering work taking a rigorous but common sense approach to the solution of engineering problems The text follows the planning modelling and design phases of engineering projects through to implementation or construction explaining the conceptual framework for undertaking projects and then providing a range of techniques and tools for solutions It focuses on engineering design and problem solving but also involves economic environmental social and ethical considerations This third edition expands significantly on the economic evaluation of projects and also includes a new section on intractable problems and systems involving a discussion of wicked problems and soft systems methodology as well as the approaches to software development Further developments include an array of additional interest boxes worked examples problems and up to date references Case studies and real world examples are used to illustrate the role of the engineer and especially the methods employed in engineering practice The examples are drawn particularly from the fields of civil and environmental engineering but the approaches and techniques are more widely applicable to other branches of engineering The book is aimed at first year engineering students but contains material to suit more advanced undergraduates It also functions as a professional handbook covering some of the fundamentals of engineering planning and design in detail *Recent Awards in Engineering*, 1983

**An Introduction to Ethorobotics** Judit Abdai, Adam Miklosi, 2024-09-27 This pioneering text explores the emerging discipline of ethorobotics which brings together the fields of animal behaviour and robotics It encourages closer collaboration between behavioural scientists and engineers to facilitate the creation of robots with a higher degree of functionality in animal human environments and to broaden understanding of animal behaviour in new and intriguing ways Utilising the knowledge of key ethologists and roboticists in the field today this book is divided into four major parts The first part is written for those with little or no background in the biology of animal behaviour particularly for those coming from an engineering background seeking an accessible introduction to the field and how it can be applied to robotic behaviour Topics include problem solving in animals social cognition and communication visual acoustic olfactory etc The second part is an introduction to the basic construction of robots for non engineers and the possibilities offered by current technical achievements and their limitations to the study of animal behaviour The third part explores the core theme of ethorobotics the basic framework of the discipline the field s evolution and current topics including ethical considerations autonomy to living social robots The fourth and final chapter looks at ethorobotics in practice through key research projects which have had the biggest impact This is a ground breaking interdisciplinary text which will appeal to upper level undergraduates postgraduates and researchers focusing on animal behaviour and cognition as well as those undertaking courses in engineering social robotics biologically inspired robotics AI and human robot and animal robot interactions Technical
