Mean, Variance and Standard Deviation

Exam 1000

Problem 1: [20 points] 20 multiple-choice questions, 1-point each

- (C) $\theta = 3$
- (D) none of the above

2. Suppose that $X \sim \text{Exp}(\lambda)$ and $Y \sim \text{Exp}(\mu)$. Which of the following is a sufficient statistic for λ and μ based on n i.i.d. observations (X_1, \dots, X_n) ?

- (A) $(\sum_{i=1}^n X_i, \sum_{i=1}^n Y_i)$ is a sufficient statistic.
- (B) $(\sum_{i=1}^n X_i, \sum_{i=1}^n Y_i)$ is the minimal sufficient statistic for the joint distribution.
- (C) The probability density of (X, Y) is the same for all λ and μ associated with the data.
- (D) The probability density of the data depends on λ and μ .
- (E) none of the above

3. Suppose that X_1, \dots, X_n is a random sample of n i.i.d. observations from a normal distribution with mean μ and variance σ^2 .

- (A) The MLE estimator of the variance is $\frac{1}{n} \sum_{i=1}^n (X_i - \bar{X})^2$.
- (B) The MLE estimator of the mean is \bar{X} .
- (C) The MLE estimator of σ^2 is $\frac{1}{n-1} \sum_{i=1}^n (X_i - \bar{X})^2$.
- (D) The MLE estimator of μ is \bar{X} .

Introduction to Statistics and Econometrics Takeshi Amemiya, 1994 This outstanding text by a foremost econometrician combines instruction in probability and statistics with econometrics in a rigorous but relatively nontechnical manner Although its only mathematical requirement is multivariate calculus it challenges the student to think deeply about basic concepts

Introductory Econometrics P. J. Dhrymes, 1978-10-27 This book has taken form over several years as a result of a number of courses taught at the University of Pennsylvania and at Columbia University and a series of lectures I have given at the International Monetary Fund Indeed I began writing down my notes systematically during the academic year 1972 1973 while at the University of California Los Angeles The diverse character of the audience as well as my own conception of what an introductory and often terminal acquaintance with formal econometrics ought to encompass have determined the style and content of this volume The selection of topics and the level of discourse give sufficient variety so that the book can serve as the basis for several types of courses As an example a relatively elementary one semester course can be based on Chapters one through five omitting the appendices to these chapters and a few sections in some of the chapters so indicated This would acquaint the student with the basic theory of the general linear model some of the problems often encountered in empirical research and some proposed solutions For such a course I should also recommend a brief excursion into Chapter seven logit and probit analysis in view of the increasing availability of data sets for which this type of analysis is more suitable than that based on the general linear model

Simulation-based Inference in Econometrics Roberto Mariano, Til Schuermann, Melvyn J. Weeks, 2000-07-20

This substantial volume has two principal objectives. First it provides an overview of the statistical foundations of Simulation based inference. This includes the summary and synthesis of the many concepts and results extant in the theoretical literature, the different classes of problems and estimators, the asymptotic properties of these estimators as well as descriptions of the different simulators in use. Second, the volume provides empirical and operational examples of SBI methods. Often what is missing even in existing applied papers are operational issues: Which simulator works best for which problem and why? This volume will explicitly address the important numerical and computational issues in SBI which are not covered comprehensively in the existing literature. Examples of such issues are comparisons with existing tractable methods, number of replications needed for robust results, choice of instruments, simulation noise and bias as well as efficiency loss in practice.

Dynamic Econometrics For Empirical Macroeconomic Modelling Ragnar Nymoen, 2019-07-09. For Masters and PhD students in Economics. In this textbook, the duality between the equilibrium concept used in dynamic economic theory and the stationarity of economic variables is explained and used in the presentation of single equations models and systems of equations such as VARs, recursive models and simultaneous equations models. The book also contains chapters on exogeneity in the context of estimation, policy analysis and forecasting, automatic computer based variable selection and how it can aid in the specification of an empirical macroeconomic model and finally on a common framework for model based economic forecasting. Supplementary materials and notes are available on the publisher's website.

Exercises and Solutions in Probability and Statistics Gary Smith, 2025-09-02. The book contains hundreds of engaging, class-tested statistics exercises and detailed solutions that test students' understanding of the material. Many are educational in their own right: for example, baseball managers who played professional ball were often catchers; stocks that are deleted from the Dow Jones Industrial Average have generally done better than the stocks that replaced them; athletes may not get hot hands but they often get warm hands with modest improvements in their success probabilities.

Introduction to Spatial Econometrics James LeSage, Robert Kelley Pace, 2009-01-20. Although interest in spatial regression models has surged in recent years, a comprehensive up-to-date text on these approaches does not exist. Filling this void, *Introduction to Spatial Econometrics* presents a variety of regression methods used to analyze spatial data samples that violate the traditional assumption of independence between observations.

Introductory Econometrics for Finance Chris Brooks, 2002. This is the first textbook to teach introductory econometrics to finance majors. The text is data and problem driven, giving students the skills to estimate and interpret models whilst having an intuitive grasp of the underlying theoretical concepts. The approach of Dr Brooks, based on the successful course he teaches at the Cass Business School, one of Europe's leading business schools, ensures that the text focuses squarely on the needs of finance students, including advice on planning and executing a project in empirical finance. The book assumes no prior knowledge of econometrics and covers important modern topics such as time series forecasting.

volatility modelling switching models and simulation methods It includes detailed examples and case studies from the finance literature Sample instructions and output from two popular and widely available computer packages EViews and WinRATS are presented as an integral part of the text
