

The Compressor System (Continued)

[illegible]

It is extremely important that the oil injected into the compressor be as clean as possible. The oil filter should be generously sized to handle full oil flow, and should have a filter element that will remove particles down to 10 microns. If the compressor is in an application where continuous operation is important or where the filter will get dirty in a short period of time, it is recommended that a dual filter arrangement be used.

Journal of Management Education 36(10)

The compressor has operating limitations that must be monitored. Protective devices are required to protect the compressor from experiencing a catastrophic failure. These include, but are not limited to high temperature and pressure, as well as liquid level switches in the suction scrubber where there is a potential for large amounts of liquid in the gas stream.
