The Schenley Experiment Jake Oresick, 2017-04-14 The Schenley Experiment is the story of Pittsburgh s first public high school a social incubator in a largely segregated city that was highly even improbably successful throughout its 156 year existence Established in 1855 as Central High School and reorganized in 1916 Schenley High School was a model of innovative public education and an ongoing experiment in diversity Its graduates include Andy Warhol actor Bill Nunn and jazz virtuoso Earl Hines and its prestigious academic program and pensions lured such teachers as future Pulitzer Prize winner Willa Cather The subject of investment as well as destructive neglect the school reflects the history of the city of Pittsburgh and provides a study in both the best and worst of urban public education practices there and across the Rust Belt Integrated decades before Brown v Board of Education Schenley succumbed to default segregation during the white flight of the 1970s it rose again to prominence in the late 1980s when parents camped out in six day long lines to enroll their children in visionary

superintendent Richard C Wallace's reinvigorated school. Although the historic triangular building was a cornerstone of its North Oakland neighborhood and a showpiece for the city of Pittsburgh, officials closed the school in 2008 citing over 50 million in necessary renovations, a controversial event that captured national attention. Schenley alumnus Jake Oresick tells this story through interviews, historical documents, and hundreds of first person accounts drawn from a community indelibly tied to the school. A memorable important work of local and educational history, his book is a case study of desegregation, magnet education, and the changing nature and legacies of America's oldest public schools.

What Makes a World-Class School and How We Can Get There by James H. Stronge, Xianxuan Xu, 2017-06-15. For years, students in the United States have lagged behind students in many other countries on such measures of achievement as the PISA and TIMSS assessments. In an increasingly globalized world, such a gap is worrisome. Armed with statistics, examples, and cautionary tales from Scandinavia to Japan, James H. Stronge and Xianxuan Xu have written a book that can help educators better prepare students and close that gap. In *What Makes a World-Class School and How We Can Get There*, you will find: Careful analysis of recent international assessment results, what they mean, and what can be done to improve them; In-depth profiles of high-achieving education systems around the globe, their histories, their lessons learned, and what they can teach educators and policymakers in the United States; Strategies for aligning successful educational approaches from international systems to U.S. schools, which strategies to use in which subjects and with which students; Transformative ideas for cultivating a truly world-class system of schooling, both simple and complex ways to raise the bar for all students, no matter what their background. Educators in every country must ensure that their students are as prepared as possible to lead a future generation of citizens. This thought-provoking and copiously researched book provides educators with a blueprint for radical improvement based on the hard-learned experiences of their peers around the world. *Superminds* by Thomas W. Malone, 2018-05-15. From the founding director of the MIT Center for Collective Intelligence comes a fascinating look at the remarkable capacity for intelligence exhibited by groups of people and computers working together. If you're like most people, you probably believe that humans are the most intelligent animals on our planet. But there's another kind of entity that can be far smarter: groups of people. In this groundbreaking book, Thomas Malone, the founding director of the MIT Center for Collective Intelligence, shows how groups of people working together in superminds like hierarchies, markets, democracies,

and communities have been responsible for almost all human achievements in business government science and beyond And these collectively intelligent human groups are about to get much smarter Using dozens of striking examples and case studies Malone shows how computers can help create more intelligent superminds simply by connecting humans to one another in a variety of rich new ways And although it will probably happen more gradually than many people expect artificially intelligent computers will amplify the power of these superminds by doing increasingly complex kinds of thinking Together these changes will have far reaching implications for everything from the way we buy groceries and plan business strategies to how we respond to climate change and even for democracy itself By understanding how these collectively intelligent groups work we can learn how to harness their genius to achieve our human goals Drawing on cutting edge science and insights from a remarkable range of disciplines Superminds articulates a bold and utterly fascinating picture of the future that will change the ways you work and live both with other people and with computers

Duncan, Richard J.
