

# Life Sciences Challenge 2013

## Aims of the project

- Highlight the non-clinical career options available to pupils with 'a passion for Science.'
- Provide an opportunity for year 10 pupils to meet young scientists in a fun and informal setting before they make their further and higher education choices.
- Demonstrate that STEM careers are a real, achievable and accessible option.
- Stimulate interest in the Life Sciences beyond the taught curriculum, and thus help prepare interested students for further study later in their careers.
- Complement activity at higher-level Chemical and Biological Olympiads, taking place in some schools, which are written exams for A-level students run by the respective Royal Societies. A different quiz format and target age group will mean no overlap between these established competitions and the LSC/HGB quiz.

Gonzalez, Thomas Uebel, Gregory Wheeler, 2013-05-28 This volume is a serious attempt to open up the subject of European philosophy of science to real thought and provide the structural basis for the interdisciplinary development of its specialist fields but also to provoke reflection on the idea of European philosophy of science. This effort should foster a contemporaneous reflection on what might be meant by philosophy of science in Europe and European philosophy of science and how in fact awareness of it could assist philosophers interpret and motivate their research through a stronger collective identity. The overarching aim is to set the background for a collaborative project organising, systematising and ultimately forging an identity for European philosophy of science by creating research structures and developing research networks across Europe to promote its development. *Meeting the Challenges to Measurement in an Era of Accountability* Henry Braun, 2016-01-29 Under pressure and support from the federal government, states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves. The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8. Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district. Comparatively little has been written about the measurement of achievement in the other grades and subjects. This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all. It addresses traditional end-of-course tests as well as alternative measures such as portfolios, exhibitions and student learning objectives. In each case, issues related to design and development, psychometric considerations and validity challenges are covered from both a generic and a content specific perspective. The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment. Edited by leading experts, these books are comprehensive and practical resources on the latest developments in the field.
