Traditionally, knowledge of God has been seen to come from two sources: nature and revelation. However, a rigid separation between these sources cannot be maintained since what purports to be revelation cannot be accepted without qualification. A rational argument is needed to infer both the existence of God from nature and the particular truth claims of the Christian faith from the Bible. Hence, the distinction between bare natural theology and ramified natural theology. The book begins with bare natural theology as background to its main focus on ramified natural theology. Bayesian confirmation theory is utilised to evaluate competing hypotheses in both cases in a similar manner to that by which competing hypotheses in science can be evaluated on the basis of empirical data. In this way, a case is built up for the rationality of a Christian theist worldview. Addressing issues of science, theology, and revelation in a new framework, this book will be of keen interest to scholars working in Religion and Science, Natural Theology, Philosophy of Religion, Biblical Studies, Systematic Theology, and Science and Culture.

*Stem Cell Battles* D. O. N. C. REED, 2015-10-06 This is a one-of-a-kind book combining easy-to-understand science in the trenches, political warfare, and inspirational stories. It aims to give hope to individuals and families who suffer from chronic disease or disability, to point out how ordinary people can make an extraordinary difference in the battle to ease suffering and save lives through supporting medical research, to share in people talking about some of the amazing progress already achieved in the new field of stem cell research, to show how even such a magnificent success as the California stem cell program is under constant attack from ideological groups, to offer medical research as a force for international cooperation, to suggest how cure research lessens the need for the mountainous costs of endless care. Unparalleled background: the author has been involved in virtually every important stem cell battle, state, national, and international, since embryonic stem cell research began. The author works closely with Robert N. Klein, sponsor of the California stem cell program, the largest source of such stem cell research funding in the world. In addition, the author is an award-winning teacher as well as a writer and seeks to entertain as well as educate. His book is not only substantive but also fun. The book would be a treasured gift for anyone suffering from an incurable illness or who is a caregiver for a loved one, for a college student considering a rewarding career in biomedicine, for scientists who want to protect and enhance their research funding, and for anyone who wants to see government respond to the needs of its citizenry. Chronic disease and disability are a prison; cure is the triumphant escape. Wheelchairs should be for temporary occupancy only.
