Multiple Approaches to Intelligent Systems Ibrahim F.

Imam,Yves Kodratoff,Ayman El-Dessouki,Moonis Ali,2004-05-19 We never create anything We discover and reproduce The Twelfth International Conference on Industrial and Engineering Applications of Artificial Intelligence and Expert Systems has a distinguished theme It is concerned with bridging the gap between the academic and the industrial worlds of Artificial Intelligence AI and Expert Systems The academic world is mainly concerned with discovering new algorithms approaches and methodologies however the industrial world is mainly driven by profits and concerned with producing new products or solving customers problems Ten years ago the artificial intelligence research gap between academia and industry was very broad Recently this gap has been narrowed by the emergence of new fields and new joint research strategies in academia

Among the new fields which contributed to the academic industrial convergence are knowledge representation machine learning searching reasoning distributed AI neural networks data mining intelligent agents robotics pattern recognition vision applications of expert systems and others It is worth noting that the end results of research in these fields are usually products rather than empirical analyses and theoretical proofs Applications of such technologies have found great success in many domains including fraud detection internet service banking credit risk and assessment telecommunication etc Progress in these areas has encouraged the leading corporations to institute research funding programs for academic institutes Others have their own research laboratories some of which produce state of the art research **Assembly** West Point Association of Graduates (Organization).,1986
