T cell response

T cells – T lymphocytes, cell mediated immunity – just touch on it a little

1. T cell activation is different than that of B cells
2. The antigen that is presented to the T cell is first **processed by antigen presenting cells – usually a macrophage**
 - a. Macrophage encounters antigen – ingests it, digests it and then separates it into antigenic determinants
 - b. Antigenic determinants migrate to the phagocyte cell surface
 - c. Antigens are held on surface of the phagocyte

on Soil Properties brings together current research on the effects of fire on the physical biological and chemical properties of soil. Written by over 60 international experts in the field, it includes examples from fire-prone areas across the world, dealing with ash, meso and macrofauna, smouldering fires, recurrent fires, and management of fire-affected soils. It also describes current best practice methodologies for research and monitoring of fire effects and new methodologies for future research. This is the first time information on this topic has been presented in a single volume, and the book will be an important reference for students, practitioners, managers, and academics interested in the effects of fire on ecosystems, including soil scientists, geologists, forestry researchers, and environmentalists.
