

EMERGENCY MEDICAL TECHNICIAN (EMT)

Emergency medical technician (EMT) or ambulance technician are terms used in some countries to denote a health care provider of emergency medical services. EMTs are clinicians, trained to respond quickly to emergency situations regarding medical issues, traumatic injuries and accident scenes.

EMTs are most commonly found working in ambulances, but should not be confused with "ambulance drivers" — ambulance staff who in the past were not trained in emergency care or driving. EMTs are often employed by ambulance services, governments, and hospitals, but are also sometimes employed by fire departments (and seen on fire apparatus), in police departments (and seen on police vehicles), and there are many firefighter/EMTs and police officer/EMTs. EMTs operate under a limited scope of practice. EMTs are typically supervised by a medical director, who is a physician.

Emergency Medical Responder

Most providers that work in ambulances will be identified as "Paramedics" by the public. However, in many cases, the most prevalent level of emergency pre-hospital care is that

which is provided by the Emergency Medical Responder (EMR). This is a level of practice recognized under the National Occupational Competency Profile, although unlike the next three successive levels of practice, the EMR is not specifically considered a Paramedic, per se. The high number of EMRs across Canada cannot be ignored as contributing a critical role in the chain of survival, although it is a level of practice that is least comprehensive (colloquially speaking), and is also generally not consistent with any medical acts beyond advanced first-aid and oxygen therapy with the exception of automated external defibrillation (which is still considered a regulated medical act in most provinces in Canada).

Primary care paramedics

Primary care paramedics (PCPs) are the entry-level of paramedic practice in Canadian provinces. The scope of practice includes performing semi-automated external defibrillation, interpretation of 4-lead ECGs, administration of Symptom Relief Medications for a variety of emergency medical conditions (these include oxygen, epinephrine, dextrose, glucagon, salbutamol, ASA and nitroglycerine), performing trauma immobilization (including cervical immobilization), and other fundamental basic medical care. Primary Care Paramedics may also receive additional training in order to perform certain skills that are normally in the scope of practice of Advanced Care Paramedics. This is regulated both provincially (by statute) and locally (by the medical director), and ordinarily entails an aspect of medical oversight by a specific body or group of physicians. This is often referred to as Medical Control, or a role played by a base hospital. For example, in the provinces of Ontario and Newfoundland and Labrador, many paramedic services

allow Primary Care Paramedics to perform 12-lead ECG interpretation, or initiate intravenous therapy to deliver a few additional medications.

Advanced Care Paramedics

The Advanced Care Paramedic is a level of practitioner that is in high demand by many services across Canada. However, still not all provinces and jurisdictions have ACPs (Quebec, New Brunswick). The ACP typically carries approximately 20 different medications, although the number and type of medications may vary substantially from region to region. ACPs perform advanced airway management including intubation, surgical airways, intravenous therapy, place external jugular IV lines, perform needle thoracostomy, perform and interpret 12-lead ECGs, perform synchronized and chemical cardioversion, transcutaneous pacing, perform obstetrical assessments, and provide pharmacological pain relief for various conditions. Several sites in Canada have adopted pre-hospital fibrinolytics and rapid sequence induction, and pre-hospital medical research has permitted a great number of variations in the scope of practice for ACPs. Current programs include providing ACPs with discretionary direct 24-hour access to PCI labs, bypassing the emergency department, and representing a fundamental change in both the way that patients with ST-segment elevation myocardial infarctions (STEMIs) are treated, but also profoundly affecting survival rates, as well as bypassing a closer hospital to get an identified stroke patient to a stroke centre.

Critical Care Paramedic

Critical Care Paramedics (CCPs) are paramedics who generally do not respond to 9-1-1 emergency calls, with the exception of helicopter
