

**3 WIRE RUN**

Reuse of existing wiring is easiest and recommended unless it is broken, cut, frayed or there is a problem. If you can reuse existing wiring — KEEP IT CLEAN AND TIDY STEP 4. If new wiring must be installed, the path shown below is recommended.

Need to install new wire? Wire and Wire-Clips (for fastening the wire to the rail) can be purchased through Customer Service at 1-800-35-GENIE or at a local Genie Professional Dealer using the information at the end of this instruction. The path shown below is recommended for routing the wire run.

1. Route two (2) lengths of two (2)-conductor wire (see above) from opener, along top of rail.
Fasten wire to rail.
— Evenly space fasteners along rail.
Fasten to header and wall (preferably with insulated staples).
Allow for some slack at the source and sensor units and cut off any excess wire.

**CAUTION:**

When using insulated staples, be aware that staples which are too tight can cut or pinch wires. Cut or pinched wires can cause the Safe-T-Beam® System to stop working. When using insulated staples, make sure you fasten them only as tightly as needed to hold the wire snugly.

2. At source and sensor, route wires through bracket as shown and attach wires at terminals. Either wire to either terminal (non-polar).

NO POLARITY
EITHER WIRE TO EITHER TERMINAL IS OK

3. If installing new wiring:
At opener, twist stripped wires together. Twist plain wires together. Feed down through control wire tube "channel" at top of opener.

4. Attach to terminals K1 and K2 (again either wire). Bundle excess wire and tape to top of power head.

AT OPENER

STB SWC SWC

4 SAFE-T-BEAM® SYSTEM TEST

Safe-T-Beam® System must be installed and working properly in order for door opener to function.

CAUTION:

During testing of the Safe-T-Beam® System, be sure to stay clear of the door and any moving parts. It is preferable to use a long-handled object to interrupt the beam during tests.

1. Start door moving in close direction.
2. Pass an object through the path of the Safe-T-Beam® System in order to interrupt beam.
— Door should stop and reverse direction to fully open position.

If door will not run in closed direction, check for:

- Misalignment of Safe-T-Beam® System (Red LED on source unit will be blinking).
- Obstruction in path of beam.
- Pinched or broken wire.
- Loose wiring connection.

If you still have a problem, contact Customer Service at 1-800-35-GENIE.

NOTE: If the situation demands that the door be closed, this can be done by pressing and holding the wall button or wall console button until the door is fully closed.

CAUTION:

As the door is closing, constantly observe the door opening to prevent anyone moving into the path of the door.
If this happens, immediately release button.

For answers to any questions, problems or concerns, please contact Customer Service at 1-800-35-GENIE.

ORDERING INFO:

To order wire or wire-clips use following part numbers:

**SAFE-T-BEAM® SYSTEM
INSTALLATION INSTRUCTION****1 IMPORTANT INFORMATION****WARNING**

- Moving Door can cause serious injury or death.
- Wall control must be mounted in sight of garage door, at least 5 feet above floor and clear of moving parts.
- Keep people clear of opening while door is moving.
- Do Not allow children to play with remote or door opener.

If Safety Reverse does not work properly:

- Close door, then disconnect opener using manual release handle.
- Do Not use remote or door opener.
- Refer to Door and Door Opener Owner's Manuals before attempting any repairs.

- Electrical Shock can cause serious injury or death.
- Power cord must be unplugged before attaching any wires.
- Be sure wire ends do not touch each other or other terminals.

If you have questions or if you need a manual, contact the distributor or manufacturer of the opener.

2 MOUNTING SOURCE & SENSOR

Locations of existing units can be reused if that is desired. Safe-T-Beam® System (STB) Source and Sensor do not have to be mounted on garage door frame. They can be placed anywhere along garage door wall that is convenient for mounting, provided the location meets the following requirements:

- 1) They must be placed across the door opening.
- 2) at proper height.
- 3) with a clear line of sight between them. (Max. Range is 30 feet).
(They may be mounted on floor, only as a last resort, if there is no other option. Not recommended.)

1. To ease mounting, source and sensor units can be detached from the bracket by pulling them apart. After mounting brackets, slide units back onto brackets.

2. Ensure there will be an unobstructed path between source and sensor. Sensor should be mounted on the side of the garage door opening that receives the least direct sunlight.

3. Once location is established, measure height of bracket as shown. Hold bracket in place and mark hole locations. 1/8" pilot holes are recommended.

No height adjustment is needed for units mounted on floor.

Interfaces to Database Systems (IDS92) Richard Cooper, 2012-12-06 Despite the volume of research carried out into the design of database systems and the design of user interfaces there is little cross fertilization between the two areas The control of user interfaces to database systems is therefore significantly less advanced than other aspects of DBMS design As database functionality is used in a wider range of areas such as design applications the suitability of the user interface is becoming increasingly important It is therefore necessary to begin applying the knowledge developed by HCI researchers to the specialised domain of database systems This volume contains revised papers from the International Workshop on Interfaces to Database Systems held in Glasgow 1 3 July 1992 The workshop aimed to develop an interaction between the design of database systems and user interfaces It discussed both the production of interfaces tailored to particular applications and also more general systems within which interfaces can be developed Some of the papers concentrate on usability aspects some discuss different interface metaphors whilst others tackle the question of designing a general conceptual model The latter topic is of particular importance as it is only by achieving an abstract model of what the user understands to be in the database that the data can be associated with appropriate interface facilities Among the contents of the volume are integrated interfaces to publicly available databases database query interface for medical information systems an integrated approach to task oriented database retrieval interfaces GRADI a graphical database interface for a multimedia DBMS cognitive view mechanism for multimedia information systems a graphical schema representation for object oriented databases a conceptual framework for error analysis in SQL interfaces a browser for a version entity relationship database Interfaces to Database Systems IDS92 is unique in that it brings together a variety of approaches from the database and HCI research communities It will provide essential reading for researchers of database systems and also
