1

The TEV reading in dB gives you a good place to start

The UltraTEV range of instruments will help to establish the likelihood of failure or the worst performing equipment.

2

Look at the number of pulses per cycle to see how severe things are

Note: Very high pulse rates often indicate something other than partial discharge such as external interference but floating metalwork or poor connections cannot be ruled out.

Likely floating metalwork or poor connections.

Likely high level partial discharge.

No concern.

Note: Very high pulse rates often indicate something other than partial discharge such as external interference but surface discharge cannot be ruled out.

Likely surface discharge – Check Ultrasonics.

Likely partial discharge.

No concern.

Note: Very high pulse rates often indicate something other than partial discharge such as external interference.

Possible surface discharge – Check Ultrasonics.

Might be some low level partial discharge.

No concern.

3

Use the measurements along with any other information you have about the equipment tested and the consequence of failure to assess the risk to the network so that you can decide what to do next.
