thesis aims to explore and discuss the same processes and methods in the context of multidisciplinary education and design objects that can support collaboration across boundaries This thesis s key contributions are the exploration and discussion of aspects of problem exploration framing and reframing in a designerly problem based multidisciplinary educational environment as well as the challenges and difficulties that educators and students encounter in the process of exploring problems and collaborating and crossing disciplinary boundaries with participants from multiple disciplines To do so this thesis first explores the importance that the framing of the design brief has in the problem solving process Furthermore the design briefs are discussed as boundary objects that serve a crucial role in negotiation communication and coordination tools between stakeholders Second the importance of the reflective process that follows the idea generation and prototype building activities are discussed as an aspect of an educational model that allows participants to explore problems and avoid design fixation Moreover these objects are discussed based on their function as disciplinary boundary crossing objects and as an aid in negotiation and collaboration objects in problem exploration Thirdly methods and processes for assessment of student characteristics and skills are discussed where tensions and trade offs between self reporting and observer based methods are studied and explored These methods then serve as boundary objects in the discussions between teaching teams in the student team formation process Furthermore team building and specifically the process of trust building and objects that aid in boundary crossing collaboration and communication to develop trust between students are also discussed Den moderna industrin st r inf r komplexa och s kallade l mska eng wicked problem som kr ver att ingenj rer g r l ngre n traditionella naturvetenskapsbaserade linj ra probleml sningsmetoder och antar samarbetande multidisciplin ra och iterativa probleml sningsstrategier F r att ta itu med den h r typen av problem v nder sig organisationer i allt h gre grad till designprobleml sningsmetoder baserade p designerns s tt att t nka agera och g ra Designers har en utm rkande f rm ga att hantera d ligt definierade tvetydiga och l mska problem genom att betona iterativ utforskning av b de problemet och l sningsutrymmena De g r detta genom designresonemangsm nster som involverar konstant iteration och tillf lliga l sningar Denna f r ndrning mot designm ssiga s tt att l sa problem har i sin tur haft en effekt p ingenj rsutbildningen d r det har skett en betydande f r ndrning mot utbildningsmodeller som anv nder designmetoder f r att engagera studenter i verklighetsn ra probleml sningsupplevelser En utmaning f r pedagoger som anv nder modeller baserade p design t nkande r att skapa strukturer som faktiskt st djer l randem len och utvecklingen av studenters f rdigheter som r f rankrade i designresonemang och agerande och inte bara i designverktyg En annan utmaning r att st dja samarbete ver flera omr den som traditionellt har haft tydliga gr nser Denna avhandling studerar den praxis som anv nds av l rare i problembaserad designutbildning f r att f rst de underliggande mekanismerna och teoretiska grunderna f r problemutforskning i multidisciplin r utbildning Dessutom syftar denna avhandling till att utforska och diskutera samma processer och metoder inom ramen f r multidisciplin r utbildning och skapa designobjekt som kan st dja samarbete ver gr nser Den h r avhandlingens nyckelbidrag r utforskandet
