observable such as bark exudates stems and leaves characters Studies of forest vegetation may differ in their underlying objectives but they all require taxonomic knowledge The process of taxonomy begins with an inventory of the flora which has been based to a large extent on reproduction related organs such as flowers and fruits But those are often difficult to observe and may not exist in the field at a given time Unlike most such guides or keys this book can be used anywhere in the tropics and provides in a straightforward two or three step process identification to the level of families which are now circumscribed according to molecular as well as morphological characters in the universally accepted scheme of the Angiosperm Phylogeny Group Plant architecture is not a prerequisite theme for plant identification however we think that an introduction to this subject is not out of place in this book architectural traits are taxonomically sound it is now time for botanists working in the tropics to have an idea on how the whole organism keeps growing Within the family accounts there is information concerning important economic plants with notes on the larger genera and particularly helpful discussion of families readily confused and how to separate them Descriptions of the families rely on short diagnosis bolstered by many photographic pictures lines drawings and extracts from the author s field books all showing features of plants as they are found in the forest

A Field Guide to Common South Texas Shrubs Richard B. Taylor, Jimmy Rutledge, Joe G. Herrera, 1997 There are over 281 species of woody plants and 32 species of cacti in the South Texas ecological region The vast majority of these are found in the lower Rio Grande Valley which is part of the subtropical Tamaulipan biotic province Many of the plant species in this area reach their northernmost boundary here The 44 plants described in this guide represent an estimated 75% of the overall brush biomass of the South Texas ecological region excluding the lower Rio Grande Valley The plants are grouped into thorned and thornless categories and alphabetized by family Distinguishing characteristics have been italicized for easy reference Similar species are also noted In this guide plants are not ranked by importance because their value to animals can differ from ranch to ranch depending on the plant s availability and the ranch s location soil type and land management practices In case a plant is not found in this guide or more information is desired a list of additional references is included
