- \_\_\_ 1. What is the main source of energy for the entire planet?  
a) crops                      b) magnetic fields                      c) sunlight                      d) the ocean
- \_\_\_ 2. The first trophic level of an ecosystem consists of  
a) plants                      b) herbivores                      c) carnivores                      d) detritivores
- \_\_\_ 3. Within an ecosystem, there will be more \_\_\_\_ than \_\_\_\_  
a) carnivores, herbivores                      b) herbivores, carnivores                      c) animals, plants
- \_\_\_ 4. Complete this statement: **All** primary producers  
a) harness the energy of sunlight through the process of photosynthesis  
b) take in food and break it down to release energy  
c) are small microorganisms, such as bacteria  
d) take in energy to assemble compounds needed for growth
- \_\_\_ 5. Which of the following **BEST** describes the flow of energy through a food chain?  
a) Energy flows between primary producers and consumers, in either direction.  
b) Energy flows from consumers to primary producers, in one direction only.  
c) Energy flows from primary producers to consumers, in one direction only.  
d) Energy flows between primary producers and consumers, in an endless cycle.
- \_\_\_ 6. A marine biologist is studying food webs in the open ocean. Which step would be used to identify the primary producers?  
a) look for small invertebrates in the top layer of the water  
b) look for fish swimming between the surface and bottom  
c) look for animals that burrow in the sand at the bottom  
d) look for tiny phytoplankton that floats near the surface

Examine the food web to indicate which statements are TRUE (T) and which are FALSE (F)

- \_\_\_ 7. The butterfly is a primary consumer
- \_\_\_ 8. The frog is a primary consumer
- \_\_\_ 9. The small songbird is an omnivore
- \_\_\_ 10. Arrows show the flow of energy
- \_\_\_ 11. The frog is a carnivore
- \_\_\_ 12. There is only one tertiary consumer in this ecosystem

**Disease Ecology** Richard S. Ostfeld, Felicia Keesing, Valerie T. Eviner, 2010-12-16 News headlines are forever reporting diseases that take huge tolls on humans wildlife domestic animals and both cultivated and native plants worldwide These diseases can also completely transform the ecosystems that feed us and provide us with other critical benefits from flood control to water purification And yet diseases sometimes serve to maintain the structure and function of the ecosystems on which humans depend Gathering thirteen essays by forty leading experts who convened at the Cary Conference at the Institute of Ecosystem Studies in 2005 this book develops an integrated framework for understanding where these diseases come from what ecological factors influence their impacts and how they in turn influence ecosystem dynamics It marks the first comprehensive and in depth exploration of the rich and complex linkages between ecology and disease and provides conceptual underpinnings to understand and ameliorate epidemics It also sheds light on the roles that diseases play in ecosystems bringing vital new insights to landscape management issues in particular While the ecological context is a key piece of the puzzle effective control and understanding of diseases requires the interaction of professionals in medicine epidemiology veterinary medicine forestry agriculture and ecology The essential resource on the subject Infectious Disease Ecology seeks to bridge these fields with an ecological approach that focuses on systems thinking and complex interactions

Evolutionary Ecology of Social and Sexual Systems J. Emmett Duffy, Martin Thiel, 2007-09-06 Understanding of animal social and sexual evolution has seen a renaissance in recent years with discoveries of frequent infidelity in apparently monogamous species the importance of sperm competition active female mate choice and eusocial behavior in animals outside the traditional social insect groups Each of these findings has raised new questions and suggested new answers about the evolution of behavioral interactions among animals This volume synthesizes recent research on the sexual and social biology of the Crustacea one of the dominant invertebrate groups on earth Its staggering diversity includes ecologically important inhabitants of nearly every environment from deep sea trenches through headwater streams to desert

soils The wide range of crustacean phenotypes and environments is accompanied by a comparable diversity of behavioral and social systems including the elaborate courtship and wildly exaggerated morphologies of fiddler crabs the mysterious queuing behavior of migrating spiny lobsters and even eusociality in coral reef shrimps This diversity makes crustaceans particularly valuable for exploring the comparative evolution of sexual and social systems Despite exciting recent advances however general recognition of the value of Crustacea as models has lagged behind that of the better studied insects and vertebrates This book synthesizes the state of the field in crustacean behavior and sociobiology and places it in a conceptually based comparative framework that will be valuable to active researchers and students in animal behavior ecology and evolutionary biology It brings together a group of internationally recognized and rising experts in fields related to crustacean behavioral ecology ranging from physiology and functional morphology through mating and social behavior to ecology and phylogeny Each chapter makes connections to other non crustacean taxa and the volume closes with a summary section that synthesizes the contributions discusses anthropogenic impacts highlights unanswered questions and provides a vision for profitable future research
