activities of visceral response systems may be modified by operant reinforcement and biofeedback procedures has grown exponentially. This research seems to show behavioral properties in the cardiovascular system that were previously believed to be exclusive attributes of the somatic response systems. The implications of this for possible therapeutic use have received widespread publicity. Questions remained unanswered about the nature of voluntary control and the conditions necessary for establishing it. The reciprocal effects of conditioned changes in cardiovascular and psychological or behavioral functioning. The use of cardiovascular events to index behavioral states and the principles and techniques whereby operant conditioning of the cardiovascular system can be clinically applied. **Child Development Abstracts and Bibliography**, 1928

*Collapsible Tubes* Peter W. Carpenter, Timothy J. Pedley, 2013-11-11 The IUTAM Symposium on Flow in Collapsible Tubes and Past Other Highly Compliant Boundaries was held on 26-30 March 2001 at the University of Warwick. As this was the first scientific meeting of its kind, we considered it important to mark the occasion by producing a book. Accordingly, at the end of the Symposium, the Scientific Committee met to discuss the most appropriate format for the book. We wished to avoid the format of the conventional conference book consisting of a large number of short articles of varying quality. It was agreed that instead we should produce a limited number of rigorously refereed and edited articles by selected participants who would aim to sum up the state of the art in their particular research area. The outcome is the present book.
