

# Human Blood Cell Typing

©Harvard Medical School 2009

Our organisms manufacture antibodies continuously to deal with the various environmental challenges. Among others, when foreign and/or self proteins/peptides contribute to the body's health, they become antigens. Antibody cell identification, pathogenesis of disease and immunologic tests: a complex but fascinating process that will be discussed in this lecture. Here, we will introduce the classification of blood types.

## Model 1 – Red Blood Cells and Antibodies

|                                          | Person with Blood Type A                                                          | Person with Blood Type B                                                          | Person with Blood Type AB                                                           | Person with Blood Type O                                                            |
|------------------------------------------|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| Cells with surface antigen               |  |  |  |  |
| Antibody present                         |  |  |  |  |
| Cells in the presence of anti-A antibody |  |  |  |  |
| Cells in the presence of anti-B antibody |  |  |  |  |

1. Blood types in the human population are characterized by the presence or absence of **antigens** on the surface of their red blood cells.

a. How many of Model 1, body using blood types are found in the human population?

b. Which blood is used in Model 1 to represent anti-A antigen?

c. What relationship is type A with blood and how is type B and blood type?
