A lever is a simple mechanism that makes it easier to lift things. When you apply effort at one end of the lever the other end also moves, lifting the load.

There are a couple of really important levers inside the Tide Mill. One is part of our huge pair of balance scales. There is a pivot point on the beam at the top, the load is a sack of grain or flour and the effort or downward force is applied by the weights placed on the other side of the beam. We balance the grain or flour with the weights to know how much we have!

The other lever is even more important. It's called the sack barrow. This makes lifting and moving the great heavy sacks of grain and flour so much easier than trying to do it by hand. The load is a sack of grain, the fulcrum is where the wheels are and the miller applies force by pushing down on the handle.

## Activities

"I use a sack barrow to help me lift heavy bags of flour. The barrow works as a lever. Can you see how?"

"How's about you have a go at making your own lever and then testing it out? Follow my instructions to see how..."

You will need:

- A ruler
- A pencil
- Coins
- A small pumpkin (or something)

"Hello, I'm Sid. I was one of the last millers at the Tide Mill before the old waterwheel broke in 1957. On the next few pages are some activities that will help you discover more about how levers work. To get you started, I've made a short video for you to watch... You can find it here"
