early childhood education it has been demonstrated that a correlation exists between the level of a child's mathematical ability and their future academic success. The reverse of this relationship has also been observed where children who are behind the mathematical skills of their peers continue to fall behind in future studies (Pelkowski et al 2019). Furthermore, it is well established in literature that the more maths learning opportunities a child is exposed to, the more growth they will experience in math knowledge (Piasta et al 2015). Logic 20 x Pattern Recognition Problems 30 x Sudoku Puzzles 30 x 2D Mazes 30 x 3D Mazes. In today's Age of Information, it is of great importance to equip students with critical thinking and logical reasoning skills to effectively decipher and make meaning from large amounts of information (Fitzgerald 2005). Logical reasoning assists in construction of concepts and knowledge in the learning process (Ongcoy 2016). This book includes logic puzzles to promote the cognitive development and logical reasoning to improve their academic performance in high school and beyond (Bouhnik Giat 2009). Shayer and Adey (1993) found that at the completion of a 2-year science program designed to promote formal operational thinking, improvements were seen in maths, English, and science results in the British National Examinations. This book is designed to provide a learning opportunity to foster the curiosity and confidence of children aged 9-14 and set them well on the path to academic success.
