Learning to Teach Mathematics in the Secondary School Sue Johnston-Wilder,Peter Johnston-Wilder,David Pimm,2005-01-14 Learning to Teach Mathematics in the Secondary School covers a wide range of issues in the teaching of mathematics and gives supporting activities to students to enable them to translate theory into practice Topics covered include mathematics in the National Curriculum different teaching approaches using ICT mathematics education for pupils with special needs in mathematics assessment and public examinations teaching mathematics post 16 professional development The Times Index ,2008 Indexes the Times and its supplements **Routledge International Companion**

to Education Miriam Ben-Peretz, Sally Brown, Bob Moon, 2004-04-28 The Routledge International Companion to Education addresses the key issues underpinning the rethinking and restructuring of education at the beginning of the new millennium. The volume contains over fifty major contributions exploring a wide range of issues including philosophy of education, the economics and resourcing of education, testing and assessment, current issues and future prospects, standards, multiculturalism, anti-racism, computers in classrooms, mother tongue education, civics and moral education. Each chapter gives a contemporary account of developments in the field and looks to the future and the directions that new activity and inquiry are likely to take. All the chapters are written from an international perspective. Learning and Practice Patricia Murphy, Kathy Hall, 2008-07-18 By examining ideas about learning that transcend typical boundaries such as school, workplace or home, this book emphasises the socially negotiated and embedded nature of meaning-making and how learners learn to use the cognitive tools of their cultural community through participation in social activity. The editors argue that this is the means by which individual agency is extended and learners' identities as forms of competency are transformed. The book locates sociocultural understanding in a wide theoretical frame and demonstrates its implications for learning and assessment, generally covering a range of educational and workplace settings. The contributions challenge ways of understanding learning and thinking about practice, both teaching and assessment. Drawing on the international literature, this book is essential reading for students of curriculum learning and assessment in all sectors, from pre-primary to further and higher education. It is suitable as a core text for masters and taught doctorate programmes. It will be of interest to a range of professionals involved with curriculum learning and the practice of teaching and assessment. It is also relevant to those in work-based and professional education and training and informal educational settings. A unique collection in a field that is underrepresented, it will also be of interest to an academic audience. **Mathematics** Fiona C. Mapp, 2002 This revision guide for Key Stage 3 Mathematics contains in-depth course coverage and advice on how to get the best results in the Year 9 National Test. It has progress check questions and exam practice questions. New Words, New Meanings: Supporting the Vocabulary Transition from Primary to Secondary School Alice Deignan, Marcus Jones, 2024-12-05 When pupils move from primary to secondary school and start to study subjects in a more specialist way, they have to learn new and unfamiliar disciplinary languages in each of the numerous subjects in their timetable. These new languages include new ways of presenting ideas and hundreds even thousands of new words as well as new meanings of words they think they already know. Based on a major research project, this book explains the nature of the language challenge students face in early secondary school and shows teachers how they can make the language of their subject less daunting and more accessible for all students. Chapters explore the language of the classroom at Key Stage 2 and Key Stage 3 using written and spoken language data from everyday classrooms. Including subject-specific word lists and contextual examples for English, maths, science, history and geography, chapters cover how language use is shaped by topic, context, relationships and purpose. The

language features of early secondary school Key principles for selecting vocabulary to teach Supporting pupils with disciplinary grammar and style Ensuring a whole school approach to language issues Full of practical tips to make the language of curriculums less daunting and more accessible for all students making the transition from primary to secondary school this book will be valuable reading for teachers educational support staff and school leaders working with children in late primary and early secondary school
