Intelligent Electrical Protection in Traditional Networks and Smart Grids Salman Rezaei, 2025-02-20 The main objective of this book is to enlighten readers on the automatic protection control and monitoring of power systems. The focus is on the development of intelligent protective algorithms to combat ferroresonance and Sub Synchronous Resonance (SSR) in both traditional networks and smart grids. Initially, the book covers the theoretical aspects of ferroresonance, SSR and protective relays. It then discusses the occurrence of ferroresonance and SSR in the grid and the impact of these phenomena on the operation of electrical components and a variety of protective relays. Intelligent algorithms are designed and tested for various types of protective relays. The book also introduces a power automation system known as the Universal Protection Control and Power Energy Management Centre (UPCEMC). This SCADA-based centre includes hardware components and new software for simulation, analysis, protection control and power system component design. Additionally, it includes power and energy management programs that are suitable for use in both traditional networks and smart grids.

Smart Grids—Renewable Energy, Power Electronics, Signal Processing and Communication Systems Applications Alfeu J. S. G. Filho, Rogério V. Jacomini, Carlos E. Capovilla, Ivan Roberto Santana Casella, 2023-11-21 This book discusses power electronics, signal processing and communication systems applications in smart grids. SG Smart grids can be considered an evolution of the classic energy model to allow a more efficient management of the relationship between supply and demand in order to overcome the contingency problems of the modern world. To achieve their goals, they use advanced technologies of information and communication, power electronics and signal processing, and can be used to integrate renewable energy sources. The book is divided into two main parts. The first part presents the application of power electronics technologies in renewable energy systems, while the second part presents some telecommunications, signal processing and energy capture technologies within the context of SGs. The chapters are written by invited expert authors according to their research areas.
