Zupan, 2008-11-04 The 10th edition of Browning and Zupan's *Microeconomics Theory and Applications* continues to motivate students and introduce them to current thinking in the field. Questions from various university question papers are given at the end of each chapter. New in this Edition: More examples and mathematical treatment of economic theories. require cooperative action such as is needed to provide economic infrastructure control public bad type externalities and make legislation Game theory provides the bridge between competitive markets and the missing discussion of cooperative action in law and economics How Competitive markets are examples subset of the Prisoners Dilemma which explains the conflict between individual self interested behavior and cooperation both in economic markets and in legislative bodies and demonstrates the need for social infrastructure and regulation of pollution and global warming Game Theory and Law Lawsuits usually involve litigation between two parties not the myriad participants in markets so the assumption of self interest constrained by markets does not carry over to legal disputes involving one on one bargaining in which the law gives one party superior bargaining power Game theory models predict the effect of different legal institutions rights and rules on the outcome of such bargaining Game theory also has a natural four model framework which is used in this book to analyze the law and economics of civil obligation which consists of torts negligence contracts and unjust enrichment
