Rene Tetzner,2006-04-09 Essay from the year 2004 in the subject English Language and Literature Studies Literature grade A University of Bedfordshire Luton Business School 4 entries in the bibliography language English abstract When we carry out surveys we can not include everyone who belongs to the research group That is why we select a portion of the group and

assume this portion applies equally to others of the group. Mainly two groups of research techniques are used in the social research namely probability sampling and non probability sampling. To the group of probability sampling belongs random sampling, systematic sampling, stratified sampling, quota sampling, cluster sampling and multi stage sampling. They rely on the idea that the researcher has some notion the chosen sample represents the whole of the selection. Included in the group of non probability sampling are purpose sampling, snowball sampling, theoretical sampling and convenience sampling. Basically it means we do not have enough information for the samples to represent a particular portion.

Listening to People Annette Lareau, 2021-07-23. A down to earth practical guide for interview and participant observation and analysis. In depth interviews and close observation are essential to the work of social scientists but inserting one's researcher self into the lives of others can be daunting especially early on. Esteemed sociologist Annette Lareau is here to help. Lareau's clear insightful and personal guide is not your average methods text. It promises to reduce researcher anxiety while illuminating the best methods for first rate research practice. As the title of this book suggests Lareau considers listening to be the core element of interviewing and observation. A researcher must listen to people as she collects data, listen to feedback as she describes what she is learning, listen to the findings of others as they delve into the existing literature on topics and listen to herself in order to sift and prioritize some aspects of the study over others. By listening in these different ways researchers will discover connections, reconsider assumptions, catch mistakes, develop and assess new ideas, weigh priorities, ponder new directions and undertake numerous adjustments all of which will make their contributions clearer and more valuable. Accessibly written and full of practical easy to follow guidance this book will help both novice and experienced researchers to do their very best work. Qualitative research is an inherently uncertain project but with Lareau's help you can alleviate anxiety and focus on success.

Service Quality Measurement: Issues and Perspectives Lewlyn L. R. Rodrigues, 2013-05-22. This book is very useful for it is not just descriptive in its nature but prescriptive too. It is descriptive in the sense that it describes the process of developing or using a metric in a problem situation and prescriptive as it clearly prescribes how a beginner can put the theory into practice. In this globalized economy maintaining quality of products and services has been the thrust area of interest among academicians and practitioners. Today there are quite a good number of books and research articles available. Nevertheless service quality measurement has always posed problems particularly in the context of service industries due to the difficulty in the measurement of the intangibles and implied needs of the customers. The research literature is filled with articles on how to quantify the services and there are several streams of arguments on the choice of the most ideal approach. However the research gap lies in the answer to the question Do these measurement instruments concur in their measurement outcomes or do they give different results in the same situation. This book primarily makes an attempt to answer this question through a case study approach. Even though there are several instruments for the measurement of service quality the two most widely used instruments are SERVQUAL and SERVPERF metrics. Comprehensively this book

explains the systematic procedure of using both the instruments in a service sector and further the procedure for conducting a statistical analysis so that one will be able to apply the same in any service sector. It then takes the reader through a series of tests in order to compare the two metrics and to prove statistically if there is the same outcome in a problem situation. The results are sure to surprise the reader and trigger the research bent of mind to undertake a similar study of such metrics and gain mastery over performing an independent research with very minimal guidance from a professional guide.
