solar powered mobility are examined in the first case It also focuses on regional tacit inventors who spur innovation in tourism mobility thanks to the informal policies but whose efforts are obstructed by the formalities of the European Union Artists with an interest in both innovations and the environment develop art services that deliver experiences of environmental qualities Though these experiences have gone unrecognised so far they are nonetheless socially beneficial The book also shows how technology suppliers develop four different patterns of sanitation each with its own pros and cons for the specific community s needs and conditions It discusses how project developers also make innovations in office systems including socially beneficial ones that do away with the need to commute It includes an analysis of interactions between consumers pursuing ethical consumption and international trailblazers in corporate responsibility and concludes that it is more rewarding to support social entrepreneurs than to attempt to moralise consumers Further analysis of interactions between sustainable investors and innovators reveals different groups opinions about policies and markets helping to explain their weak influence on policies Mushrooming local energy initiatives are now evolving into energy service companies producing shifts on energy markets Why these innovators emerge and how certain policies are blocking them are explained The policies of the United States and European Union are compared with regard to the main barriers to and drivers of the renewable energy business Though the US invests more money and takes more risks it is less cost effective in terms of the number of enterprises and jobs thanks to the feed in tariffs in Europe Lastly the book also discusses policies that invest in education skills knowledge and know how exchange but instead abolish perverse subventions of vested interests to create conditions for sustainable development      *Chapter 1: Introduction to Physical Geography* Michael
