**in Systems Engineering** Mourad Debbabi,Fawzi Hassaïne,Yosr Jarraya,Andrei Soeanu,Luay Alawneh,2010-11-16 At the dawn of the 21st century and the information age communication and computing power are becoming ever increasingly available virtually pervading almost every aspect of modern socio economical interactions Consequently the potential for realizing a significantly greater number of technology mediated activities has emerged Indeed many of our modern activities are heavily dependant upon various underlying systems and software intensive platforms Such technologies are commonly used in everyday activities such as commuting traffic control and management mobile computing navigation mobile communication Thus the correct function of the forenamed computing systems becomes a major concern This is all the more important since in spite of the numerous updates patches and firmware revisions being constantly issued newly discovered logical bugs in a wide range of modern software platforms e.g operating systems and software intensive systems e.g embedded systems are just as frequently being reported In addition many of today's products and services are presently being deployed in a highly competitive environment wherein a product or service is succeeding in most of the cases thanks to

its quality to price ratio for a given set of features Accordingly a number of critical aspects have to be considered such as the ability to pack as many features as needed in a given product or service while currently maintaining high quality reasonable price and short time to market
