Basic Gas Chromatography-Mass Spectrometry F.W. Karasek, R.E. Clement, 1988-02 The book begins by covering the basic principles of both gas chromatography GC and mass spectrometry MS to the extent necessary to understand and deal with the data generated in a GC MS analysis The focus then turns to the particular requirements created by a direct combination of these two techniques into a single instrumentation system The data generated and their use are covered in detail The role of the computer and its specific software receives special attention especially in the matter of compound identification via mass spectral search techniques GC MS computer instrumentation has reached such a plateau of excellence today that the present commercial systems will not be obsolete for a long time to come Therefore a detailed description of these systems is not only informative but is also pertinent to the subject matter of this book Finally representative applications and results obtained with GC MS computer techniques are presented and chosen in such a way as to permit extrapolation of specific applications to similar problems encountered by the reader To aid the reader in mastering the subject matter and increase understanding interpretation problems and suggested readings are included The format is instructional informative and application oriented with material presented in such a way as to be useful to a broad spectrum of people The book serves as a text in its own right The software package Gas Chromatography Mass Spectrometry A Knowledge Base by F A Settle Jr and M A Pleva provides rapid access to a wealth of current information in the GC MS field Its three diskettes 5 1/4 inch allow the user three ways to access the index mode the tree mode and a keyword search mode The package may be purchased separately and is available for the IBM PC and compatibles The software provides a valuable supplement to the book
