Intelligent Agents VI. Agent Theories, Architectures, and Languages Nicholas R. Jennings, Yves Lesperance, 2000-02-16 Intelligent agents are one of the most important developments in computer science in the 1990s Agents are of interest in many important application areas ranging from human computer interaction to industrial process control The ATAL workshop series aims to bring together researchers interested in the core aspects of agent technology Specifically ATAL addresses issues such as theories of agency software architectures for intelligent agents methodologies and programming languages for realizing agents and software tools for developing and evaluating agent systems One of the strengths of the ATAL workshop series is its emphasis on the synergies between theories infrastructures architectures methodologies formal methods and languages This year's workshop continued the ATAL trend of attracting a large number of high quality submissions In more detail 75 papers were submitted to the ATAL 99 workshop from 19 countries After stringent reviewing 22 papers were accepted for presentation at the workshop After the workshop these papers were revised on the basis of comments received both from the original reviewers and from discussions at the workshop itself This volume contains these revised papers *Intelligent Agent Software Engineering*, 2003-01-01 From theoretical and practical viewpoints the application of intelligent software agents is a topic of major interest There has been a growing interest not only in new methodologies for development of intelligent software agents but also the way in which these methodologies can be supported by theories and practice Intelligent Agent Software Engineering focuses on addressing the theories and practices associated with implementing intelligent software agents **Intelligent Agents** Michael J. Wooldridge, 1995-01-26 This volume coherently presents 24 thoroughly revised full papers accepted for the ECAI 94 Workshop on Agent Theories Architectures and Languages There is currently considerable interest from both the AI and the mainstream CS communities in conceptualizing and building complex computer systems as collections of intelligent agents This book is devoted to theoretical and practical aspects of architectural and language related design and implementation issues of software agents Particularly interesting is the comprehensive survey by the volume editors which outlines the key issues and indicates via a comprehensive bibliography topics for further reading In addition a glossary of key terms in this emerging field and a comprehensive subject index is included Intelligent Decision Technology Support in Practice Jeffrey W. Tweedale, Rui Neves-Silva, Lakhmi C. Jain, Gloria Phillips-Wren, Junzo Watada, Robert J. Howlett, 2015-08-22 This book contains a collection of innovative chapters emanating from topics raised during the 5th KES International Conference on Intelligent Decision Technologies IDT held during 2013 at Sesimbra Portugal The authors were invited to expand their original papers into a plethora of innovative chapters espousing IDT methodologies and applications This book documents leading edge contributions representing advances in Knowledge Based and Intelligent Information and Engineering Systems It acknowledges that researchers recognize that society is familiar with modern Advanced Information Processing and increasingly expects richer IDT systems

Each chapter concentrates on the theory design development implementation testing or evaluation of IDT techniques or applications Anyone that wants to work with IDT or simply process knowledge should consider reading one or more chapters and focus on their technique of choice Most readers will benefit from reading additional chapters to access alternative technique that often represent alternative approaches This book is suitable for anyone interested in or already working with IDT or Intelligent Decision Support Systems It is also suitable for students and researchers seeking to learn more about modern Artificial Intelligence and Computational Intelligence techniques that support decision making in modern computer systems Intelligent Information Technologies: Concepts, Methodologies, Tools, and Applications Sugumaran,

Vijayan,2007-11-30 This set compiles more than 240 chapters from the world s leading experts to provide a foundational body of research to drive further evolution and innovation of these next generation technologies and their applications of which scientific technological and commercial communities have only begun to scratch the surface **Intelligent Agents**

VII. Agent Theories Architectures and Languages Cristiano Castelfranchi,Yves Lesperance,2003-07-31 Intelligent agents are one of the most important developments in computer science of the past decade Agents are of interest in many important application areas ranging from human computer interaction to industrial process control The ATAL workshop series aims to bring together researchers interested in the core micro aspects of agent technology Speci cally ATAL addresses issues such as theories of agency software architectures for intelligent agents methodologies and programming languages for r lizing agents and software tools for applying and evaluating agent systems One of the strengthsoftheATALworkshopseriesisitsemphasisonthesynergiesbetweentheories languages architectures infrastructures methodologies and formal methods This year s workshop continued the ATAL trend of attracting a large number of high quality submissions In more detail 71 papers were submitted to the ATAL 2000 workshop from 21 countries After stringent reviewing 22 papers were accepted for publication and appear in these proceedings As with previous workshops in the series we chose to emphasize what we perceive asimportantnewthemesinagentresearch Thisyear sthemeswerebothassociatedwith the fact that the technology of intelligent agents and multi agent systems is beginning to migrate from research labs to software engineering centers As agents are deployed in applications such as electronic commerce and start to take over responsibilities for their human users techniques for controlling their autonomy become crucial As well the availability of tools that facilitate the design and implementation of agent systems becomes an important factor in how rapidly the technology will achieve widespread use **Intelligent Agents and Multi-Agent Systems** Kazuhiro Kuwabara,Jaeho

Lee,2003-08-02 Autonomous agents and multi agent systems are computational systems in which several semi autonomous agents interact with each other or work together to perform some set of tasks or satisfy some set of goals These systems may involve computational agents that are homogeneous or heterogeneous they may involve activities on the part of agents having common or distinct goals and they may involve participation on the part of humans and intelligent agents This volume

contains selected papers from PRIMA 2002 the 5th Pacific Rim International Workshop on Multi Agents held in Tokyo Japan on August 18 19 2002 in conjunction with the 7th Pacific Rim International Conference on Artificial Intelligence PRICAI 02 PRIMA is a series of workshops on autonomous agents and multi agent systems integrating activities in the Asian and Pacific Rim countries PRIMA 2002 built on the great success of its predecessors PRIMA 98 in Singapore PRIMA 99 in Kyoto Japan PRIMA 2000 in Melbourne Australia and PRIMA 2001 in Taipei Taiwan We received 35 submissions to this workshop from 10 countries Each paper was reviewed by three internationally renowned program committee members After careful reviews 15 papers were selected for this volume We would like to thank all the authors who submitted papers to the workshop We would also like to thank all the program committee members for their splendid work in reviewing the papers Finally we thank the editorial staff of Springer Verlag for publishing this volume in the Lecture Notes in Artificial Intelligence

Personal Intelligent User Interfaces 2008 Markus Fischer, 2007-03-26 Inhaltsangabe Abstract The evolution of computing and communication is on the fast track its impact on work and life style is immense and carries with it vast social and economical implications for both individuals and enterprises Advances in wireless and broadband technologies and trends such as pervasive networks fixed mobile convergence seamless communication and sensor networks will have a broader impact and an even more profound influence on the way we live than the personal computer PDA cellular phone and Internet had from 1995 2005 Always on and ubiquity the credos of today's ICT market have already become customer demands Under constraint to satisfy these demands generate new service revenues and retain higher percentages of existing customers worldwide operating telecommunication companies have to break new ground Personalization is considered a key differentiator in the increasingly competitive landscape With the increasing proliferation of service types and features a personal intelligent user interface will enable higher customer utility and also make new service scenarios possible The main problem areas discussed in this thesis are technology forecast and usability evaluation of a new technology Two well known quotations as follows will introduce the problem of technology forecasting This telephone has too many shortcomings to be seriously considered as a means of communication The device is inherently of no value to us A more contemporary the following statement by William Gates III from 1981 640Kbyte ought to be enough for anybody These statements might cause amazement especially considering the fact that both companies are still in business Admittedly as the telephone replaced the telegraph money transfer became the Western Union Telegraph Company's primary line of business However this begs the question how such companies were even capable of surviving such major misjudgements regarding their strategic technology alignment Generally speaking the only possible strategies were changing the focus of their business as was the case with Western Union simply getting lucky or alternatively having enough money to assimilate the missing technology through purchases But it can't be the goal of a global player to miss or lose millions and in the case of a small firm to go out of business simply because the chief executive or the person in charge misdiagnosed strategic technology

Engineering Klaus R. Dittrich, Andreas Geppert, Moira C. Norrie, 2003-05-15 Since the late 1980s the CAiSE conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of Information Systems Engineering CAiSE 2001 was the 13th conference in this series and was held from 4th to 8th June 2001 in the resort of Interlaken located near the three famous Swiss mountains the Eiger Mönch and Jungfrau The first two days consisted of pre conference workshops and tutorials The workshop themes included requirements engineering evaluation of modeling methods data integration over the Web agent oriented information systems and the design and management of data warehouses Continuing the tradition of recent CAiSE conferences there was also a doctoral consortium The pre conference tutorials were on the themes of e business models and XML application development The main conference program included three invited speakers two tutorials and a panel discussion in addition to presentations of the papers in these proceedings We also included a special practice and experience session to give presenters an opportunity to report on and discuss experiences and investigations on the use of methods and technologies in practice We extend our thanks to the members of the program committee and all other referees without whom such conferences would not be possible The program committee whose members came from 20 different countries selected 27 high quality research papers and 3 experience reports from a total of 97 submissions The topics of these papers span the wide range of topics relevant to information systems engineering from requirements and design through to implementation and operation of complex and dynamic systems

Agricultural Informatics Amitava Choudhury, Arindam Biswas, Manish Prateek, Amlan Chakrabarti, 2021-03-02 Despite the increasing population the Food and Agriculture Organization of the United Nations estimates 70% more food will be needed in 2050 than was produced in 2006 issues related to food production have yet to be completely addressed In recent years Internet of Things technology has begun to be used to address different industrial and technical challenges to meet this growing need These Agro IoT tools boost productivity and minimize the pitfalls of traditional farming which is the backbone of the world's economy Aided by the IoT continuous monitoring of fields provides useful and critical information to farmers ushering in a new era in farming The IoT can be used as a tool to combat climate change through greenhouse automation monitor and manage water soil and crops increase productivity control insecticides pesticides detect plant diseases increase the rate of crop sales cattle monitoring etc Agricultural Informatics Automation Using the IoT and Machine Learning focuses on all these topics including a few case studies and they give a clear indication as to why these techniques should now be widely adopted by the agriculture and farming industries
