Macmillan/McGraw-Hill Math: Teacher ed., v. 1, 2004 **Teaching Mathematics Using Interactive Mapping** Sandra L. Arlinghaus, Joseph J. Kerski, William C. Arlinghaus, 2023-12-11 Teaching Mathematics Using Interactive Mapping offers novel ways to learn basic math topics such as simple relational measures or measuring hierarchies through customized interactive mapping activities These activities focus on interactive web-based Geographic Information System (GIS) and are relevant to today's problems and challenges Written in a guided hands-on understandable manner all activities are designed to build practical and problem-solving skills that rest on mathematical principles and move students from thinking about maps as references that focus solely on where is something to analytical tools focusing primarily on the whys of where Success with this transition through interaction permits most readers to master mathematical concepts and GIS tools

FEATURES Offers custom-designed geographical activities to fit with specific mathematical topics Helps students become comfortable using mathematics in a variety of professions Provides an innovative engaging and practical set of activities to ease readers through typically difficult often elementary mathematical topics fractions the distributive law and much more Uses web-based GIS maps apps and other tools and data that can be accessed on any device anywhere at any time requiring no prior GIS background Written by experienced teachers and researchers with lifelong experience in teaching mathematics geography and spatial analysis Features an accompanying Solution Guide available on the book's product page that is beneficial for instructors students and other readers as an aid to gauging progress This textbook applies to undergraduate and graduate students in universities and community colleges including those in basic mathematics courses as well as upper-level undergraduate and graduate students taking courses in geographic information systems remote sensing photogrammetry geography geodesy information science engineering and geology Professionals interested in learning techniques and technologies for collecting analyzing managing processing and visualizing geospatial datasets will also benefit from this book as they refresh their knowledge in mathematics

Teaching Statistics Using Baseball Jim Albert, 2022-02-04 Teaching Statistics Using Baseball is a collection of case studies and exercises applying statistical and probabilistic thinking to the game of baseball Baseball is the most statistical of all sports since players are identified and

evaluated by their corresponding hitting and pitching statistics There is an active effort by people in the baseball community to learn more about baseball performance and strategy by the use of statistics This book illustrates basic methods of data analysis and probability models by means of baseball statistics collected on players and teams Students often have difficulty learning statistics ideas since they are explained using examples that are foreign to the students The idea of the book is to describe statistical thinking in a context that is baseball that will be familiar and interesting to students The book is organized using a same structure as most introductory statistics texts There are chapters on the analysis on a single batch of data followed with chapters on comparing batches of data and relationships There are chapters on probability models and on statistical inference The book can be used as the framework for a one semester introductory statistics class focused on baseball or sports This type of class has been taught at Bowling Green State University It may be very suitable for a statistics class for students with sports related majors such as sports management or sports medicine Alternately the book can be used as a resource for instructors who wish to infuse their present course in probability or statistics with applications from baseball The second edition of Teaching Statistics follows the same structure as the first edition where the case studies and exercises have been replaced by modern players and teams and the new types of baseball data from the PitchFX system and fangraphs com are incorporated into the text
