

Chapter 9 Inventories: Additional Issues

QUESTIONS FOR REVIEW OF KEY TOPICS

Question 9-1

GAAP generally requires the use of historical cost to value assets, but a departure from cost is necessary when the utility of an asset is no longer as great as its cost. The utility or benefits from inventory result from the ultimate sale of the goods. This utility could be reduced below cost due to deterioration, obsolescence, or changes in price levels. To avoid reporting inventory at an amount greater than the benefits it can provide, the lower of cost and net realizable value approach to valuing inventory was developed. This approach results in the recognition of losses when the value of inventory declines below its cost, rather than in the period in which the goods are ultimately sold.

Question 9-2

The lower of cost and net realizable value determination can be made based on individual inventory items, on logical categories of inventory, or on the entire inventory.

Question 9-3

If inventory write-downs are commonplace for a company, losses usually are included in cost of goods sold. However, when a write-down is substantial and unusual, GAAP requires that the loss be expressly disclosed. This could be accomplished with a disclosure note or, instead of including the loss in cost of goods sold, by reporting the loss in a separate line in the income statement, usually among operating expenses. Even with separate line item reporting, a disclosure note still would be appropriate.

Question 9-4

The gross profit method estimates cost of goods sold, which is then subtracted from cost of goods available for sale to obtain an estimate of ending inventory. The estimate of cost of goods sold is found by multiplying sales by the historical ratio of cost to selling prices. The cost percentage is the complement of the gross profit ratio ($1 - GP\%$).
