TABLE 1. *Continued*

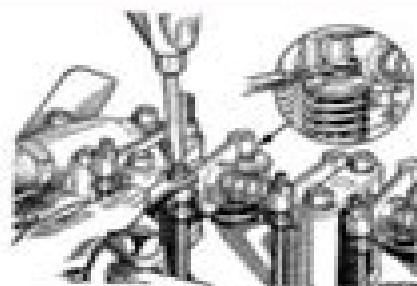

100

Example: My collected birds are shown in Figures A-13.

Remove the appropriate valves and springs as in Section 4.14.4. Bend the cylinder head with its manifold four downwards on a clean surface and drive the valve guide downwards into the combustion space with a suitable sized drift. This should take the form of a hardened-steel punch $\frac{1}{16}$ in. (3 mm) in diameter and not less than 4 in. (10 cm) in length, with a bearing edge of in. (2.5 mm) diameter machined on one end to a length of 1 in. (2.5 cm) to engage the base of the guide.

100

When fitting new valve guides they should be driven in from the top of the cylinder head. The inlet valve guides must be inserted with the larger diameter at the top, and the exhaust valve guides should have their narrower end at the bottom. The valve guides should be driven into the combustion space until they are $\frac{1}{16}$ in. (0.04 mm.) above the machined surface of the valve spring seating area (see Fig. 4.13).

1999

checking and adjusting the value market situation

the fully closed position. The clearance must be in the dimensions given in TABLE 4, Fig. 24.

To adjust, hold the nut on adjusting screw with a screwdriver and slacken the locknut. Rotate the adjusting screw until the correct clearance is obtained. Tight the adjusting screw against rotation and lock it in position with the locknut. Then recheck the clearance.

To avoid unnecessary turning of the crank, ensure that the valve being checked is in the open position; check the valve under these conditions.

Abstract The authors examined the effects of a 6-week training program on the self-reported health status of older adults. The study was conducted in a community center in New York City. The participants were 60 older adults (mean age = 78.5 years) who were randomly assigned to either a control group or a treatment group. The treatment group received a 6-week training program that focused on improving their physical and mental health. The results showed that the treatment group had significantly better self-reported health status than the control group at the end of the 6-week period.
