300 Problems in Special and General Relativity Mattias Blennow, Tommy Ohlsson, 2021-12-09
Einstein's theories of special relativity and general relativity form a core part of today's undergraduate or Masters level physics curriculum. This is a supplementary problem book or student's manual consisting of 150 problems in each of special and general relativity. The problems which have been developed, tested, and refined by the authors over the past two decades are a mixture of short form and multi-part extended problems with hints provided where appropriate. Complete solutions are elaborated for every problem in a different section of the book; some solutions include brief discussions on their physical or historical significance. Designed as a companion text to complement a main relativity textbook, it does not assume access to any specific textbook. This is a helpful resource for advanced students for self-study, a source of problems for university teaching assistants, or as inspiration for instructors and examiners constructing problems for their lectures, homework, or exams.

Aesthetic Marx Samir Gandesha, Johan F.

Hartle,2017-10-19 The whole of Marx's project confronts the narrow concerns of political philosophy by embedding it in social philosophy and a certain understanding of the aesthetic. From those of aesthetic production to the poetry of the future as Marx writes in the Eighteenth Brumaire, from the radical modernism of bourgeois development to the very idea of association which defined one of the main lines of tradition in the history of aesthetics, steady references to Dante, Shakespeare and Goethe, and the idea that bourgeois politics is nothing but a theatrical stage, the aesthetic has a prominent place in the constellation of Marx's thought. This book offers an original and challenging study of both Marx in the aesthetic and the aesthetic in Marx. It differs from previous discussions of Marxist aesthetic theory as it understands the works of Marx themselves as contributions to thinking the aesthetic. This is an engagement with Marx's aesthetic that takes into account Marx's broader sense of the aesthetic as identified by Eagleton and Buck Morss as a question of sense perception and the body. It explores this through questions of style and substance in Marx and extends it into contemporary questions of how this legacy can be perceived or directed analytically in the present. By situating Marx in contemporary art debates, this volume speaks directly to lively interest today in the function of the aesthetic in accounts of emancipatory politics and is essential reading for researchers and academics across the fields of political philosophy, art theory and Marxist scholarship. Chemical News and Journal of Physical Science, 1903 **Gravitation** Charles W. Misner, Kip S. Thorne, John Archibald Wheeler, 2017-10-03 First published in 1973, *Gravitation* is a landmark graduate level textbook that presents Einstein's general theory of relativity and offers a rigorous full year course on the physics of gravitation. Upon publication, *Science* called it a pedagogic masterpiece and it has since become a classic, considered essential reading for every serious student and researcher in the field of relativity. This authoritative text has shaped the research of generations of physicists and astronomers, and the book continues to influence the way experts think about the subject. With an emphasis on geometric interpretation, this masterful and comprehensive book introduces the theory of relativity, describes physical applications from stars to black holes and gravitational waves, and portrays the field's frontiers. The book also offers a unique alternating two-track pathway through the subject. Material focusing on basic physical ideas is designated as Track 1 and formulates an appropriate one-semester graduate level course. The remaining Track 2 material provides a wealth of advanced topics instructors can draw on for a two-semester course, with Track 1 sections serving as prerequisites. This must-have reference for students and scholars of relativity includes a new preface by David Kaiser reflecting on the history of the book's publication and reception, and a new introduction by Charles Misner and Kip Thorne discussing exciting developments in the field since the book's original publication. The book teaches students to grasp the laws of physics in flat and curved spacetime, predict orders of magnitude, calculate using the principal tools of modern geometry, understand Einstein's geometric framework for physics, explore applications including neutron stars, Schwarzschild and Kerr black holes, gravitational collapse, gravitational waves, cosmology, and so much more. **The Chemical News and Journal of Industrial**
