STEP 1:

Distribute a (-1) to all terms in second parentheses.

$$(5x^2 + 2x + 3) - (2x^2 + 4x - 6)$$

STEP 2:

Use integer rules to rewrite: $(+)(-) = (-)$ and $(-)(-) = (+)$.

$$5x^2 + 2x + 3 - 2x^2 - 4x + 6$$

STEP 3:

Use different shapes/colors to identify like terms.

$$5x^2 + 2x + 3 - 2x^2 - 4x + 6$$

STEP 4:

Combine (add) like terms.

$$3x^2 - 2x + 9$$

Bishop, 2014-05-10 Introduction to Discrete Linear Controls Theory and Applications focuses on the design analysis and operation of discrete time decision processes The publication first offers information on systems theory and discrete linear control systems discrete control system models and the calculus of finite differences Discussions focus on the calculus of finite differences and linear difference equations summations control of cylinder diameter generalized discrete process controller with sampling difference equations control theory and system models The text then examines classical solution of linear difference equations with constant inverse transformation and measures and environmental effects of system performance The manuscript takes a look at parameter selection in first order systems considering sampling and instrumentation errors second order systems and system instability including responses of the generalized second order process controller criterion for stability of discrete linear systems and proportional plus difference control The publication is a valuable source of information for engineers operations researchers and systems analysts

Finite Geometries, Groups, and Computation Alexander Hulpke, Robert Liebler, Tim Penttila, Akos Seress, 2008-08-22 This volume is the proceedings of a conference on Finite Geometries Groups and Computation that took place on September 4-9 2004 at Pingree Park Colorado a campus of Colorado State University Not accidentally the conference coincided with the 60th birthday of William Kantor and the topics relate to his major research areas Participants were encouraged to explore the deeper interplay between these fields The survey papers by Kantor O'Brien and Penttila should serve to introduce both students and the broader mathematical community to these important topics and some of their connections while the volume as a whole gives an overview of current developments in these fields

Approximation Methods and Analytical Modeling Using Partial Differential Equations Tamara Fastovska, Yurii Kolomoitsev, Kateryna Buryachenko, Marina Chugunova, 2025-03-28 Adequate mathematical modeling is the key to success for many real world projects in engineering medicine and other applied areas As soon as an appropriate mathematical model is developed it can be comprehensively analyzed by a broad spectrum of available mathematical methods For example compartmental models are widely used in mathematical epidemiology to describe the dynamics of infectious diseases and in mathematical models of population genetics While the existence of an optimal solution under certain condition can be often proved rigorously this does not always mean that such a solution is easy to implement in practice Finding a reasonable approximation can in itself be a challenging research problem This Research Topic is devoted to modeling analysis and approximation problems whose solutions exploit and explore the theory of partial differential equations It aims to highlight new analytical tools for use in the modeling of problems arising in applied sciences and practical areas Researchers are invited to submit articles that investigate the qualitative behavior of weak solutions removability conditions for singularities the dependence of the local asymptotic property of these solutions on

initial and boundary data and also the existence of solutions Contributors are particularly encouraged to focus on anisotropic models analyzing the preconditions on the strength of the anisotropy and comparing the analytical estimates for the growth behavior of the solutions near the singularities with the observed growth in numerical simulations The qualitative analysis and analytical results should be confirmed by the numerically observed solution behavior
