**Use a secure and trusted browser.** that protects your privacy against intrusive web trackers.

**Enable two-factor authentication wherever available.** It adds an additional layer of security to your online accounts and makes them harder to break into.

**Limit all app permissions and website tracking to absolute minimum.** Maybe your calendar app doesn't really need to access your camera after all?

**Beware of phishing scams.** Get familiar with the ways that scammers use social engineering and other tricks to scam people. When you know how the trick works, it's much easier to avoid it.

**Always verify domain names.** when entering any personal data to a website. A common trick is to imitate a website you trust. Replicating a specific domain name is much more difficult.

**Never click on suspicious links, banners or pop-ups.** Obvious, but critical. Never click anything that you don't trust completely.

**Verify the identity of anyone who is asking for your personal information.** If a bank reaches out to you and asks for your details, drop the call and call the official number to verify if it was really them.

**Set a time in the calendar for security checkups.** Allocate time to periodically update passwords, unsubscribe from spam, delete unused apps and browser extensions - prevention is key.

**Educate yourself.** Make an effort to read more about privacy and security to ensure you know how to stay safe and how to avoid unnecessary risks online.

**Internet of Things Security** Shishir K. Shandilya, Soon Ae Chun, Smita Shandilya, 2022-09-01 Internet of Things IoT security deals with safeguarding the devices and communications of IoT systems by implementing protective measures and avoiding procedures which can lead to intrusions and attacks. However, security was never the prime focus during the development of the IoT hence vendors have sold IoT solutions without thorough preventive measures. The idea of incorporating networking appliances in IoT systems is relatively new and hence IoT security has not always been considered in the product design. To improve security an IoT device that needs to be directly

accessible over the Internet should be segmented into its own network and have general network access restricted. The network segment should be monitored to identify potential anomalous traffic and action should be taken if a problem arises. This has generated an altogether new area of research which seeks possible solutions for securing the devices and communication amongst them
