**How to Write Your Undergraduate Dissertation in**

**Criminology** Suzanne Young, 2022-04-07 This book provides a guide for undergraduate criminology and criminal justice students undertaking their final year dissertation. It speaks to the specific challenges for criminology students who may wish to research closed institutions such as prisons, courts, or the police, or vulnerable populations such as people with convictions, victims of crime, or young people, and offers guidance on how to undertake research on these topics while avoiding many of the access and ethical obstacles. It takes students through each phase of the dissertation, from designing and planning the research to writing up and presenting the completed work. The complexities of undertaking research on sensitive topics and with criminal justice institutions are discussed throughout, offering an insight into some of the challenges that students may be faced with and suggestions to overcome obstacles. It offers practical guidance for empirical and library-based projects and provides students with suggested resources for accessing primary and secondary data. It utilises a mixture of worked examples, top tips, practical strategies, and student activities to ensure the dissertation is a manageable and enjoyable process. This book will be beneficial to all undergraduate criminology students who have to undertake either a library-based or empirical dissertation. The examples and activities in the book will also be useful for dissertation supervisors who can use them to support their dissertation students.

Maybury, 1999

Until now there has been no state of the art collection of the most important writings in automatic text summarization. This book presents the key developments in the field in an integrated framework and suggests future research areas. With the rapid growth of the World Wide Web and electronic information services, information is becoming available on line at an incredible rate. One result is the oft-decried information overload. No one has time to read everything yet we often have to make critical decisions based on what we are able to assimilate. The technology of automatic text summarization is becoming indispensable for dealing with this problem. Text summarization is the process of distilling the most important information from a source to produce an abridged version for a particular user or task. Until now there has been no state of the art collection of the most important writings in automatic text summarization. This book presents the key developments in the field in an integrated framework and suggests future research areas. The book is organized into six sections: Classical Approaches, Corpus Based Approaches, Exploiting Discourse Structure, Knowledge Rich Approaches, Evaluation Methods, and New Summarization Problem Areas. **Text Data Management and Analysis** ChengXiang Zhai, Sean Massung, 2016-06-30 Recent years have seen a dramatic growth of natural language text data including web pages news articles scientific literature emails enterprise documents and social media such as blog articles forum posts product reviews and tweets This has led to an increasing demand for powerful software tools to help people analyze and manage vast amounts of text data effectively and efficiently Unlike data generated by a computer system or sensors text data are usually generated directly by humans and are accompanied by semantically rich content As such text data are especially valuable for discovering knowledge about human opinions and preferences in addition to many other kinds of knowledge that we encode in text In contrast to structured data which conform to well defined schemas thus are relatively easy for computers to handle text has less explicit structure requiring computer processing toward understanding of the content encoded in text The current technology of natural language processing has not yet reached a point to enable a computer to precisely understand natural language text but a wide range of statistical and heuristic approaches to analysis and management of text data have been developed over the past few decades They are usually very robust and can be applied to analyze and manage text data in any natural language and about any topic This book provides a systematic introduction to all these approaches with an emphasis on covering the most useful knowledge and skills required to build a variety of practically useful text information systems The focus is on text mining applications that can help users analyze patterns in text data to extract and reveal useful knowledge Information retrieval systems including search engines and recommender systems are also covered as supporting technology for text mining applications The book covers the major concepts techniques and ideas in text data mining and information retrieval from a practical viewpoint and includes many hands on exercises designed with a companion software toolkit i.e. MeTA to help readers learn how to apply techniques of text mining and information retrieval to real world text data and how to experiment with and improve some of the algorithms for interesting application tasks The book can be used as a textbook for a computer science undergraduate course or a reference book for practitioners working on relevant problems in analyzing and managing text data
