

Intellix™ GLA 100

Cost Effective Transformer Warning Solution

Product Overview

Transformers are key and expensive components of the electrical grid and knowledge of their health condition is essential to having a reliable network. When a transformer's insulation system is overstressed, gases are produced that dissolve into the insulating oil. Dissolved Gas-in-oil Analysis (DGA) is recognized as the best indicator of developing faults.

The Intellix GLA 100 is a small and intuitive transformer "gas level alarm" that uses the same proven technology used in other more expensive DGA monitors. It provides a cost-effective transformer warning solution, specifically tailored for monitoring less critical and less expensive transformers that would otherwise typically be left unmonitored.

Key Benefits

- Proven technology at entry-level price point
- Continually measures transformer fault gas level and rate of change
- Easy to install, configure and use
- Integrated manual sampling port

Applications

Critical Generation and Transmission transformers are typically equipped with fully featured multi-gas monitoring systems capable of providing real-time diagnostics. As the criticality decreases, so does the number of monitored transformers and the number of fault gases monitored.

The Intellix GLA 100 offers substantial, yet cost effective, monitoring for the over 300,000 significant transformers worldwide that are currently unmonitored*. It offers a monitoring solution for important, less critical, less expensive transformers, where the aim is less about protecting the asset and more about:

- Dispensing with regular site visits to perform routine manual DGA sampling
- Getting prior warning that the transformer's health is failing so replacement can be scheduled
- Avoiding costly overtime and week-end work to replace transformer urgently upon failure
- Mitigating the inconvenience with commercial/industrial customers

The Intellix GLA 100 is ideal for small Power Transformers and longer lead-mounted Distribution Transformers. It can also be used on oil-filled instrument transformers (ICTs and PTs), oil-filled "pipe type" cables and on vacuum type oil-filled OITCs.

Fault Gas Alarm

- Gas sensor responds 100% to Hydrogen (general fault gas) and also sensitive to Carbon Monoxide (overheated paper)
- Small form factor. Easily mounted on a 3 inch valve exposed to the transformer oil. No extra piping or pump required. Weighing only 3.5 kg

Configurable Alarms

- Alarm raised when an abnormal level of fault gas is reached or when the rate of change (RoC) of this gas level increases rapidly, thus enabling further investigation of the developing fault condition.
- Two triggers are available showing increasing severity: Alert level and then Alarm level.
- The Intellix GLA 100 comes pre-set with default alarm settings for simplicity but these are also user configurable using DIP switches.

Straightforward Alerts

- Uncomplicated and easy to understand
- 4 front, sunlight visible, light indicators
- 3 dry contact relays available to communicate alerts to a control centre

Low Maintenance

- Simple and reliable. No moving parts
- Vacuum-resistant membrane
- No consumables or field calibration required
- No PC needed to install / configure
- Regular automatic self-test with service alarm

New

Optional
Android® App to
read gas ppm
and RoC values
