Manly,L. McDonald,D.L. Thomas,Trent L. McDonald,Wallace P. Erickson,2007-05-08 We have written this book as a guide to the design and analysis of field studies of resource selection concentrating primarily on statistical aspects of the comparison of the use and availability of resources of different types Our intended audience is field ecologists in general and in particular wildlife and fisheries biologists who are attempting to measure the extent to which real animal populations are selective in their choice of food and habitat As such we have made no attempt to address those aspects of theoretical ecology that are concerned with how animals might choose their resources if they acted in an optimal manner The book is based on the concept of a resource selection function RSF where this is a function of characteristics measured on resourceunits such that its value for a unit is proportional to the probability of that unit being used We argue that this concept leads to a unified theory for the analysis and interpretation of data on resource

selection and can replace many ad hoc statistical methods that have been used in the past

**Contemporary Psychometrics** Albert Maydeu-Olivares, John J. McArdle, 2005-05-06 Contemporary Psychometrics features cutting edge chapters organized in four sections test theory factor analysis structural equation modeling and multivariate analysis The section on test theory includes topics such as multidimensional item response theory IRT the relationship between IRT and factor analysis estimation and testing of these models and basic measurement issues that are often neglected The factor analysis section reviews the history and development of the model factorial invariance and factor analysis indeterminacy and Bayesian inference for factor scores and parameter estimates The section on structural equation modeling SEM includes the general algebraic graphic rules for latent variable SEM a survey of goodness of fit assessment SEM resampling methods a discussion of how to compare correlations between and within independent samples dynamic factor models based on ARMA time series models and multi level factor analysis models for continuous and discrete data The final section on multivariate analysis includes topics such as dual scaling of ordinal data model specification and missing data problems in time series models and a discussion of the themes that run through all multivariate methods This tour de force through contemporary psychometrics will appeal to advanced students and researchers in the social and behavioral sciences and education as well as methodologists from other disciplines

Plant Microtechniques and Protocols Edward Chee Tak Yeung, Claudio Stasolla, Michael John Sumner, Bing Quan Huang, 2015-09-19 A proper understanding of the structural organization of the plant body is essential to any study in plant biology Experimental studies in vivo and in situ will lead to structural physiological and cellular changes of the experimental material To study macroscopic and microscopic changes different histological methods and microtechniques can be used as they provide valuable information of the experimental system In addition the observed structural changes allow investigators to set hypothesis for further studies based on one's own observation Thus proper selection and utilization of microtechniques are a must for the success of a research program At present an up to date collection of protocols are not readily available in the literature The latest work in plant microtechniques was published in 1999 by Ruzin but many others are no longer in print e.g Jensen 1964 O'Brien and McCully 1981 Furthermore a majority of published works focus on techniques related to general processing and staining procedures A comprehensive treatment that encompasses broader applications of microtechniques to other disciplines is lacking e.g archeology wood science etc There is a need to create a comprehensive volume of botanical methods and protocols which includes traditional and novel techniques that can be used by researchers in plant science and investigators in other disciplines that require plant microtechniques in their research and teaching This book covers a wide variety of applications and brings them up to date to make them understandable and relevant especially to students using the methods for the first time It is our intention to create a useful reference for plant histology and related methods that will serve as a foundation for plant scholars researchers and teachers in the plant sciences E-Health
