Reviews of Infrared and Millimeter Waves Kenneth J. Button, 2013-11-11 This is the first book in the series that is being called The Reviews of Infrared and Millimeter Waves The series will contain the manuscripts of invited papers from conferences on this subject This first book contains some of the invited papers from the XXth General Assembly of the Union Radio Scientifique Internationale Washington August 1981 We were asked by the URSI Committee to organize a two day symposium on millimeter and submillimeter waves This required the difficult choice of five topics which turned out to be 1

Ultra low Noise Millimeter Wave Receivers Detectors and Mixers 2 Free Electron Maser and Gyrotron 3 Measurements of Power and Noise Power 4 Complex Dielectric Properties of Solids and Liquids and 5 Radioastronomy We have not yet collected all the manuscripts and perhaps we never shall because the time and effort required to prepare a comprehensive review manuscript works a hardship on research scientists who are already overburdened we are particularly grateful therefore to the authors who have worked so hard to contribute the chapters to this book The first four chapters contribute to the timely topic of detectors mixers and receivers These authors Tucker Feldman Rudner Okamura Hogg and their well known colleagues have been among the leaders in this exciting emerging field for the past few years The fifth chapter by Sakai and Genzel is the most comprehensive treatment of the metal mesh filter science that can be found in one place
